

Amatite

ROOFING

THIS advertisement will bring to your attention the *best and cheapest ready roofing* on the market. Here is how we prove it the best.

In the first place Amatite is made in one standard thickness, whereas other ready roofings range from a thin, flimsy half-ply to a three-ply thickness.

The three-ply thickness (which, by the way, is only one sheet of felt) is the only kind that can be compared with Amatite.

But right here is the point. Amatite is better made, has better water-proofing material, and weighs more per square foot than the three-ply grade of other makes, and *costs much less.*

These facts make Amatite the most desirable roofing made.

But in addition to its superiority in material and manufacture, Amatite has one

distinction which makes it stand out above all others. *It has a real mineral surface.*

It is hardly necessary to state the advantages of such a mineral surface, the freedom from painting or coating, the perfect protection against all kinds of weather, the great durability.

This mineral surface is embedded in a layer of Pitch, *the greatest known waterproofing material.* Beneath this in turn are two layers of the best grade of wool felt—cemented together by more Pitch, making the whole a roofing that is *absolutely waterproof.*

No other ready roofing can compare with this mineral-surfaced, waterproof, weather-proof, durable roof. That's why we say—*Don't buy your roofing until you have seen Amatite.*
