

A Delicious Tubbing
and then refreshing sleep—there is nothing better for any baby. Always use the "Albert."

BABY'S OWN SOAP

and your child will have a fine complexion and never be troubled with skin diseases.

The National Council of Women of Canada have recommended it as very suitable for nursery use.

The Albert Toilet Soap Co.
MONTREAL.
Makers of the celebrated Albert Toilet Soaps.

Dr. Spinney & Co.

Detroit's Old Reliable Specialists.
Ripe in Age, Rich in Honor, and Experience a Third of a Century, Whose successes are Without a Parallel; the Sufferer's Friend; the People's Specialist.

WOMEN weak, pale, tired, nervous, dependent, no ambition, losing flesh, fretful, overworked, given to worry and solitude, backache and headache, nerves unstrung, sleepless nights, limbs trembling, faint feeling, Leucorrhoea, painful periods, or any Female Diseases, quickly cured by our FAMOUS PRESCRIPTION.

YOUNG MEN led into evil habits, not knowing the harm, and who are suffering from the vices and errors of youth, and troubled with Nervous Debility, Loss of Memory, Bashfulness, Confusion of Ideas, Headache, Dizziness, Palpitation of the Heart, Weak Back, Dark Circles Around the Eyes, Flashes on the Face, Loss of Sleep, Tired Feelings in the Morning, Evil Propensities, Dull, Stupid, Aversion to Society, No Ambition, Bad taste in the Mouth, Dreams and Night Loss of Seminal Fluid, Frequent Urination, sometimes accompanied with slight burning, Kidney Troubles, or Diseases of the Genito Urinary Organs can here find a safe, honest and speedy cure. Charges reasonable, especially to the poor. CURES GUARANTEED.

VARIICOLE and PILES, and **KNOTTED VEINS** of the Leg cured at once without operation. Doctors will deny this. But we are proving our claims every day. The method is simple, the cure is certain and permanent.

\$1,000 for Failure.
RUPTURE and FISTULA CURED. The SIGNS OF STYPHILIS are blood and skin diseases, painful swellings, bone pains, mucous patches in the mouth, hair loose, pimples on the back and wartlike growths. We cure these for life without injurious drugs.

Have you the seeds of any past disease working in your system? **IMPOTENCY or Loss of Sexual Power**, and do you contemplate **MARRIAGE**? Do you feel safe in taking this step? You can't afford to take any risk. Like father, like son. We have a never failing remedy that will purify the blood and positively bring back Lost Power.

MIDDLE-AGED MEN.—There are many troubled with too frequent evacuations of the bladder, often accompanied by a slight smarting or burning sensation, and weakening of the system in a manner the patient cannot account for. On examination of the urinary deposits aropy sediment will often be found, and sometimes particles of albumen, and color of a thin milkish hue, again changing to a dark, torpid appearance. There are men who die of this difficulty ignorant of the cause, which is the second stage of seminal weakness. The doctors will guarantee a perfect cure in all such cases, and healthy restoration of the genito-urinary organs.

BOOK FREE.—Those unable to call should write for question list and book for home treatment. Thousands cured at home by correspondence. Our honest opinion always given, and good, honest, careful treatment given to every patient.

Dr. Spinney & Co

Office Hours—9 to 8 p. m.; Sundays, 9 to 11 a. m., also 2 to 4 p. m. Consultation free.

RAISING CELERY.

The Manner of Treating the Crop is Now Simplified.

Our manner of treating the celery crop of late years is very much simplified, says Mr. Peter Henderson. Instead of sowing the seed in a hot-bed or cold frame, as practiced in Europe, it is sown in the open ground, as soon as it is fit to work, and kept carefully clear of weeds until the time of planting, in June and July. In our warmer climate, it is raised in hot-beds, as in England, a majority of the plants would run to seed. The tops are shown off once or twice before planting, so as to insure "stocky" plants which suffer less on being transplanted.

After the ground has been nicely prepared, lines are struck out on the level surface, three feet apart, and the plants set six inches apart in rows. If the weather is dry at the time of planting, great care should be taken that the roots are properly "firmed." Our custom is to turn back on the row, and grow by the side of each plant gently with the foot. This compacts the soil, and partially excludes the air from the roots until new rootlets are formed, which will usually be in forty-eight hours after which all danger is over. This practice of pressing the soil closely around the roots is essential in planting of all kinds, and millions of plants are annually destroyed by its omission. After the planting of the celery is completed, nothing further is to be done for six or seven weeks, except running through between the rows with the cultivator or hoe, and freeing the plants of weeds, until they get strong enough to crowd them down. This will bring us to about the middle of August, by which time we have usually that moist and cold atmosphere essential to the growth of celery. Then we begin the "earthing up" necessary for the blanching and whitening of that which is wanted for the market during the months of September, October and November. The first operation is that of "handing," as we term it; that is, after all the soil has been drawn up against the plant with the hoe, it is further drawn close around each plant by the hand, firm enough to keep the leaves in an upright position and prevent them from spreading. This being done, more soil is drawn against the row (either by the plow or hoe, as circumstances require), so as to keep the plant in this upright position. The blanching process must, however, be finished by digging the soil from between the rows, and banking it up clear to the top on each side of the row of celery. Three feet is ample distance between the rows, but when larger sorts are used the width of the rows must be at least four and a half or five feet.

Quiet for Tilt Drains.

Farmers spend time and money on tile or stone underdrainage, and then have the outlet of the drain wholly unprotected. Consequently, in a year or so, the tiles and stones are washed away by the action of the frost, displacing the drain, and partly or wholly filling the channel. If the fall is slight, the whole work sometimes becomes worthless.

less. For a proper outlet, lay a large flat stone, two or more feet square, above the tile, and in the center of the gravel. Place a number of small stones on each side to aid in supporting the stone in a proper position. After heavy rains, or at least several times a year, the outlet should be removed all accumulations of material.

French Butter Making.

In the French system the butter is made from very sour cream, is washed in the churn, not salted, but sold for present use in Paris and England, and the keeping quality is not much studied. Notwithstanding the extreme sourness of the cream when churned, the butter has almost the same appearance as that made from sweet cream—this is the result of the washing. The finest French butter is shipped at once to the consumers, and generally consumed before the end of three days; so its keeping qualities are not material. No salt is used for the home market. It is put up in large balls of twenty-eight pounds to forty pounds, each ball being covered by a piece of fine flannel and placed in a willow basket. Second and third class butter is made up in one pound rolls in each box. M. Lepelletier is the largest exporter of this kind of butter and is said to ship 1,200 boxes per week; his trade amounting to 12,000,000 francs per year. It is sent in refrigerating cars. In Paris all butter is sold by auction at ten markets. Women are mostly the buyers. Three or four hundred lots are sold every hour. Sworn officials weigh and register the butter, and make up the accounts of sale. The different kinds of butter are named from the places where they are made, and classified according to quality. The best butter is sold at fifty and seventy-five cents per pound.

Laws Affecting Milk.

Laws affecting the sale of milk are often unjust, but where a dairyman insists on his rights he will make no mistake. In England the law requires the milk to contain a certain proportion of solids, to protect against watering the milk. A dairyman who was arrested for selling milk below the standard made his defense that as he sold his milk as it came from the cows and added no water, and also as cows varied the standard of their milk each day, according to the feed and the season, he was guilty of no crime, and had the right to sell his milk on its merits, provided it was pure. He brought proof of the facts and was discharged from custody.

THE TROPICS

Chas. A. trial Poverty in Life's Necessaries to the Land of the Tropics.

That the tropics are really poor in natural resources instead of being rich is the argument of Dr. Semmler of Cordoba, Mexico. His arguments are especially interesting just now, when so much attention is being attracted to the hot regions of the world as places for exploitation. The doctor in a letter to the Medical Record says:

"All men dream of the marvelous riches of the tropics, of the birds with rainbow plumage, of the extravagant flowers, of the elegant tree ferns, of the banana and palms with waving leaves, and of the cocoa palm, which furnishes man with everything necessary for life. Indeed, we pity him who has never seen a tropical landscape, as we pity him who has never seen the sea. Then we think of the enormous treasures the banana, Spaniards and Dutch have harvested from their tropical colonies, and naturally we think that the tropics are the richest regions of the world. All this may be true, yet nevertheless, in another sense, instead of being rich, the tropics are fatally poor. Unable to secure the necessities of life, the people of tropical countries are like the man in whose hand everything turns to gold, yet who perishes of hunger and thirst."

"Of all the breadstuffs necessary for a man the tropics furnish only corn and rice, and these only to a limited extent. They have no wheat, rye or potatoes. The banana may be, as Humboldt says, 133 times more productive than wheat and 44 times more so than potatoes, yet it cannot replace either as food. Nor can white men live for any length of time on rice and corn alone, nor on bananas and palm nuts. Native tropical foods can only hold body and soul together, as they furnish but little vigor, energy and power. No machine can do good work with poor fuel. A man who has neither bread nor meat cannot get life and strength and push from tea, coffee, sugar, vanilla and all precious spices. Tropical products are merely commercial luxuries, and if the inhabitants of cold climates did not buy them the people of the tropics would lack the necessities and comforts of life and would yet choke with their own riches."

"If we wish to know the effects of the poor diet of the tropics combined with the effects of the heat, we have only to look at the inhabitants of these countries. As a general rule, they are thin, poorly built and unfit for intellectual or physical labor. Occasional exceptions will only confirm the rule. "Even the foods which are produced are insufficient in amount, so that the least interference with the annual crops results in famines, as is the case in India today. Indeed, India has always been the land of fabulous riches of a few and of famines of the millions. Until recently in the cold countries there were none of fabulous wealth and but few famines."

"Everything in hot countries is harmful to man; the ground, the water and the air, swarming with miasms and vermin, and with torment and danger. Life is as much a torment as a pleasure, for whatever makes life worth living is lacking. They depend for indispensable necessities upon the temperate zones, to which they furnish only the luxuries."

Inconsistent Woman.

While visiting in the East she learned that her fiancé had once been engaged to a girl who lives in Providence. Of course she insisted on meeting this girl, jealously recognizing that she was handsome, bright and unusually attractive.

"I have heard," the Detroit girl finally blurted out, "that you and Harry finally thought of a great deal of each other."

"Fiddlesticks! He was a little boy and I a little girl. Just poppy love, don't you know. He went out West and had the good sense to fall in love with you, and I'm going to marry at Easter."

"But who broke it off?"

"Neither of us. We just drifted apart. Harry's a capital fellow, and he was fortunate in finding you. I want you both at my wedding. Remember me kindly to him and congratulate him."

All this was tactful, but the young lady came home annoyed because Harry had been engaged and because he had never told her of it.

"Why," he said, when brought to book, "I never thought it worth mentioning. We were mere children. I long since ceased to think of her as more than a friend."

"But she's a sweet girl."

"Very."

"And she's stylish, vivacious and smart."

"Yes."

"And much more beautiful than I."

"Yes, why, darling, you don't mean it," for she was holding the ring toward him, her eyes flashing and her face as hard as granite. It required an hour of endearing words, praise and caresses to get that ring back where he wanted it.—Detroit Free Press.

The Empress Dowager's name is Tse Tai.

But who will believe the report, though cabled with particularity of fact, that they called her Susie for short.

—Detroit Journal.

Here the king gave command for the instant decapitation of thirty conspirators.

"And yet," observed His Majesty sadly, "there are those who insist that kingcraft involves little or no headwork!"—Detroit Journal.

CAUSE FOR LAME HORSES.

Most Farriers Lower the Left Side of the Fore Limb of the Right Side.

A curious mistake, common among blacksmiths, was pointed out to me recently by a practicing veterinary surgeon to whom I took a horse that had become lame gradually, with considerable heat in the feet. He drew attention to the fact that most farriers, being right-handed, unintentionally lower the left side of the foot more than the right side. As a result the pastern does not set quite evenly on the coffin bone, or the bone suspended inside the wall of the hoof, and in time the concussion of the foot on the street produces soreness in the joint which could not exist if the foot were level. A trifle out of joint, so to speak, the foot at night cannot repair the injury received or the fatigue of the day; it gradually gets feverish and the pastern does not set quite evenly on the coffin bone, or the bone suspended inside the wall of the hoof, and in time the concussion of the foot on the street produces soreness in the joint which could not exist if the foot were level. A trifle out of joint, so to speak, the foot at night cannot repair the injury received or the fatigue of the day; it gradually gets feverish and the pastern does not set quite evenly on the coffin bone, or the bone suspended inside the wall of the hoof, and in time the concussion of the foot on the street produces soreness in the joint which could not exist if the foot were level.
