

from which relief was originally sought. Neurasthenia, neuralgia and other manifestations, either of an active or passive character, are common and are always peculiarly rebellious to treatment. Cerebro-nervous affections peculiar to women associated with pathological disturbances of the reproductive organs are legion, and most trying to physician and patient. I have found nothing so well suited to these cases as Antikamnia Tablets, administered in doses of from one to three tablets and repeated every one, two or three hours according to the attendant's judgment. These tablets afford complete relief without fostering a drug habit and their exhibition is attended with no unpleasant after effects. For the relief of painful menstruation there is no combination of remedies so generally successful as Antikamnia & Oodeine Tablets. Their sedative, analgesic and anodyne properties especially commend them in the neuralgic and congestive forms of this distressing affection."

HAY FEVER.—Any reliable remedial agent that is valuable in the treatment of this malady is welcomed both by the physician and his patients who may be hay fever sufferers. The etiology, prophylaxis and treatment of this affection have often been the subject of study and experiment by physicians and also by intelligent laymen. The disease has been described as a catarrhal affection of the conjunctiva and the mucous membrane of the respiratory tract, characterized by an annual recurrence at about the same date in a given case. Another view is that the disease is a neurosis, and that the local symptoms (rhinorrhea, sensory disturbances, etc.) are due to vasomotor paralysis. The most conspicuous symptoms of hay fever are a burning and itching sensation in the nasal passages; profuse lacrimation; and then, febrile manifestations; frontal headache; and not in a few cases, asthma. The diagnosis having been established the subject of prevention and treatment is of the utmost importance. It would be utterly useless and wearisome to attempt to review the list of remedies and the methods of treatment that have been proposed for this disorder. The interests of physicians and patients will best be served by a brief recital of facts respecting the most successful mode of treatment known at this time. A glance at the list of symptoms and a brief consideration of the pathology of hay fever lead to the immediate conclusion that the chief indications are to check the discharge, allay the irritation that gives rise to the paroxysms of sneezing, reduce the turgescence of the nasal mucosa and relieve the stenosis. The only single remedy that meets these indications is *adrenalin*, as represented in Solution Adrenalin Chloride and Adrenalin Inhalant. By stimulating the vasomotor supply it contracts the arterioles, and thus promptly and efficiently relieves all the annoying symptoms referable to vasomotor paralysis. Moreover, by its powerful astringent action upon the mucous membrane, it blanches completely in a few minutes, and renders to the patient a positive degree of comfort. Indeed the results that have been accomplished with Adrenalin in this field alone are remarkable, and of the utmost importance. Messrs. Parke, Davis & Company, Manufacturing Pharmacists and Biologists, of Walkerville, who offer this valuable astringent agent, have also prepared a very complete treatise on hay fever, asthma, bronchitis and similar troubles, with full information relative to the treatment of these maladies with Adrenalin and other other agents.
