### BOOK NOTICES.

CHEMISTRY.—General, Medical and Pharmaceutical. By John Attfield, Ph. D., F.C.S., Prof. of Practical Chemistry to the Pharmaceutical Society of Great Britain. From the second and enlarged English edition. H. C. Lea, Philadelphia. Copp, Clarke & Co., Toronto.

This manual, which is about the size of Fowne's Chemistry, is intended as a systematic exponent of the general truths of chemistry. The chemical notation of the work is in accordance with modern theories. It differs from other text-books in the following particulars: first, in the exclusion of matter relating to compounds which, at present, are only of interest to the scientific chemist; secondly, in containing the chemistry of every substance recognized officially or in general, as a remedial agent. A few leading properties of the elements are first referred to, followed by a consideration of the relation of the simple and compound radicals. The chemistry of substances naturally associated in vegetables and animals is next considered. Toxicology, and the chemical and microscopical characters of morbid mine and urinary calculi, are next referred to at considerable length.

The subject of chemical notation, atomic weights, and quantivalence is very clearly and comprehensively explained; and numerous tables are given, exhibiting the various reactions in practical chemistry. It will be found a most valuable book for pupils, assistants, and others, engaged in medicine and pharmacy, and we heartily commend it to our readers.

MANUAL OF MIDWIFERY. By Alfred Meadows, M.D., M.R.C.P., Lond., Physician to the Hospital for Women. First American, from the Second London Illustrated Edition. Philadelphia: Lindsay & Blakiston Toronto: Copp, Clark & Co. Price \$3.00

This is a most convenient practical and concise work on the subject of Midwifery. It is specially designed for students; but it will also be
