QUESTIONS AND ANSWERS.

Miscellaneous.

GARNISHEEING WAGES.

A certain party which we shall call A. owes me the sum of \$50 for which he gave me his note. This note has been past due for a number of years. After notifying A. several times, calling his attention to the same, I resolved to take action against him according to law

A. is a hired man and married, he also has a family. He earns \$33 per month and has a steady job.

1. How much of A's salary does the law permit me to garnishee? The party receives his wages monthly.

2. Provided A. continues to work for the same party, is the one garnishee good for each succeeding month's wages until the note I hold against A. is paid in full, or does the law compel me to renew the said garnishee every month until my claim is satisfied?

Man. A. L.

Ans.—1. By the law of Manitoba \$25 a month of a married man's wages, is exempt from garnishee proceedings.

2. The order of garnisheement only applies to moneys actually in the hands of the garnishee, at the time the order is served upon him. It does not cover wages to be earned in the future, by the judgment debtor. If you wish to cover future wages you must issue a new order.

LEGAL HOLIDAYS.

This question arose in our family

will you kindly answer it? How many holidays in a year may a working man have?

Man. M. D.
Ans.—By statute the following are legal holidays but at the same time a hired man on the farm is not legally exempt from doing of ordinary chores on legal holidays: Christmas, New Year's, twenty fourth of May, First of July, Labor Day, and Thanksgiving Day. Holidays are fixed by Provincial legislation and may vary in the different provinces but these apply in Manitoba and in fact all over Canada. In some of the provinces regular church holy days are observed.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-THIRD YEAR.

Pay me when Cured

My World-famed Remedy Given on Free Trial Until Cured.

I point with just pride to my invention, which during 40 years has enabled more than 100,000 sick men and women to regain their health and vigor—a record to be proud of. I say record, because I have the proof always open to inspection for those interested. Since discovering the marvellous curing powers of electricity 40 years ago, I have faithfully and persistently labored to bring it to the notice of sufferers who need building up mentally and physically, who are troubled with Nervousness, Rheumatism, Lame Back, Wrecked Stomach, Varicocele, etc., and how well I have succeeded is best shown by the fact that the Dr. Sanden Electric Herculex is now standard in every part of the world. I admit the first 30 years was hard work, but I am now enjoying the success and satisfaction I feel is due me.

I do not believe that there to-day is a grown person who doubts the wonderful curative power of electricity—in fact, I take it for granted there is not. I, therefore, only find it necessary to give a few hints as to its application. To restore strength and vigor to a worn-out system, to feed the brain and nerves, to drive uric acid out of the blood, to strengthen a muscular center, as in lame back, to give renewed and healthy action to the stomach, liver and kidneys—in short, to really renew the life forces of the whole body, the continuous galvanic current must be used and applied in

a mild, prolonged manner, to allow the system to absorb it. The strong, harsh current applied from the ordinary battery is mostly wasted, as the system only accepts a small portion of it, just as the sudden heavy shower mostly runs off, while a gentle, prolonged rain is thoroughly absorbed. My invention does exactly as explained above. You put it on when going to bed and take it off on arising in the morning. It gives a soothing, exhilarating current you instantly feel, but not sufficient to in the least disturb you. It fills you with new life, and electrifies every nerve and drop of blood in your body. As weakness and disease is a LACK of electricity, how can you wear my Electric Herculex without receiving benefit? I know you cannot, therefore I invite you to send for it on absolute free trial.

Not a Cent to be Paid Until Cured

The price is as low as \$5.00 in many cases, and you get a discount for cash if you prefer to deal that way. As the founder of the Electric Body-Battery system of treatment, my success is the envy of many, and my Herculex is, of course, imitated (what good thing is not?), but my great knowledge to advise and direct my patients is mine alone and cannot be imitated. I give it free to all who use my invention until the cure is complete—My Herculex is guaranteed to give a current for at least one year.

Call or send for my Electric Herculex to-day, or if you want to look into the matter further, I have two of the best little books ever written on electricity and its medical uses, which I send free, sealed, upon request.

DR. C. F. SANDEN, 140 Yonge St., Toronto, Ont.

THRESHING MACHINE INFORMATION.

Can you tell me of any gasoline outfit for threshing? I want something very small, the smallest possible for doing threshing work. Also if it is possible to get an outfit that could be used for plowing as well when detached from the threshing part. Can coal oil be used on these machines?

Alta. E. B. W.

Ans.—Any of the machine companies advertising in these columns could supply a gasoline engine to run a small separator, and the threshing machine companies all make small machines. One could scarcely expect to get a small traction gasoline engine with power enough to draw a large set of gangs. You had better get literature from the threshing machine companies and gasoline engine companies, as it will give fuller information than we can furnish here. No, we think coal oil is not suitable for the mechanism of gasoline engines.

SMALL GRIST MILL—CULTIVATION.

1. Would you kindly give me full information re price, etc., of a small grist mill capable of grinding 140 pounds per hour, of which you wrote in a recent issue of your valuable paper?

2. I broke a piece of land last July between 10th and 15th, the plowing being 3 inches deep. The land was cleared of wood and had been yielding red top hay. The land is of 4 inch black loam, on top of dark grey clay, which works into black loam after cultivation. I did not back-set above land this fall. How should I proceed to prepare this land in the spring, and what crop should I sow to obtain best results? Would disc-harrowing in the spring be sufficient, without plowing? Should this kind of land be broken in fall? Would early spring breaking and seeding down directly be advisable?

Man. T. B.

Ans.—1. Made by A. R. Tattersall 75 Mark Lane, London Eng., cost complete about \$2,000.

2. On questions of immediate local nature such as above, our readers can generally get more full and reliable information than we are able to give from their neighbors. Not being entirely familiar with the locality we simply give it as our opinion that it will pay to plow this piece of land in the spring, harrow it down thoroughly and then sow to wheat or oats. It would also grow a good crop of potatoes or in fact any crop. If it were simply disc'd in the spring there would be a danger of grass springing up again. Like other land this would be better for being broken in the spring and backset in the fall and unless the sod is very light one could not expect much of a crop sown right on the breaking.
