Fire, Life and Accident.

VISITED THE CITADEL

Archbishop of Canterbury Uses Heliograph

to Seed Message of Greeting.

Quebec, Que., Sept. 1.—The Archbishop of Canterbury and party visited the citadel yesterday morning. They were received by the commander of the fortress, Colonel Wilson and Mrs. Wilson, and were shown all over the fort and its outwork. While in the citadel His Grace sent the following heliograph message to the artillery camp at the Island of Orleans, nine miles distant: "The Archbishop of Canterbury sends greetings to the artillery camp."

In a very few minites the following reply was received: "The camp commandant and officers, Royal Canadian Artillery, thank His Grace the Archbishop of Canterbury for his message and sincerely return his greetings. (Signed) Camp Commandant.

On leaving the citadel the party

mandant."

On leaving the citadel the party drove to Spencerwood, where they were received by the Lieutenant-Governor and Lady Jette. After lancheon they were shown over the grounds, and had a splendid view of the St. Lawrence, stretching for miles both eastward and westward.

On taking leave of the Lieutenant-Governor and Lady Jette, the party entered their carriages and drove to the C.P.R. Station, where Mr. Morgan's special train was in readiness to receive them. All having embark. gan's special train was in reathest to receive them. All having embark-ed on the train at 3 p.m. precisely, it left for Montreal. Quite a large crowd had assembled to see the dis-tinguished party off, and as the train left the station, the Archbishop was

loudly cheered.

His Grace and Mrs. Davidson speak enthusiastically of the warm reception they received in the first Canadian city they ever had the pleasure of visiting.

Archbishop in Montreal. Montreal, Sept. 1.—The Primate of All England reached here last even-ing from Quebec. His crace was met at the Windsor station by Arch-bishop Carmichael, Sir Geo. Druni-mond and others.

FEAR GERMAN INVASION. Congo Free State Is Constructing Concealed Forts.

Cape Town, Sept. 1.—Official information from British Central Africa says that the Congo Free State is constructing concealed forts of considerable magnitude on the west shore of Lake Tanganyika, and that one of these forts, which is equipped with 20 guns, is within two hours of the German frontier. It is believed that the Belgians apprehend a German invasion. A number of natives who are German subjects have been expelled from the Congo Free State. It is understood that negotiations It is understood that negotiations regarding the matter are now pro-ceeding between Berlin and Brus-

The west shore of Lake Tanganyika the south shore to British Central Africa and the east shore to German East Africa. The area of the lake is estimated at 14,000 square miles.

NINE KILLED IN QUEBEC. Send-on Collision of G.T.R. Passenger Trains, Near Richmond, Result of

Failure to Obey Orders. Montreal, Sept. 1.-At 11 o'clock Montreal, Sept. 1.—At 11 o'clock yesterday morning express train No. 5, from Island Pond, westbound, met an excursion special from St. Hyacinthe, bound for Sherbrooke, one mile from Richmond. It was a headon collision, while both trains were going at a high rate of speed. Nine at least were killed and 23 were injured, as far as can be learned up to this hour. The following is the list of killed and injured:

YOUNG LADIES MARRIED WOMEN

Mrs. Jno. C. Huffman Speaks to you all.

She Tells of her Troubles and their Cure that you may be Benefited.

Napanee, Ont., Aug. 29 .- (Special) .-There are many women in Canada who will yet write letters of thanks to Mrs. Jno. C. Huffman of this place.
Mrs. Huffman suffered as they are

"I am making this statement to the public in the hope that it may help other young ladies or married women."

The Greek Church.
The Greek church is the largest Christian organization except that of Rome, from which it seceded. It would rank third, however, if the Protestant churches were united. Its political importance depends upon the fact that the czar is its head.

The only way to have a friend is

Too many eye-openers impair the vision. Minard's Liniment Cures Dandruff, of birds.

EXPLORE EARTH'S DEPTHS. Would Take Eighty-five Years to Sink Shaft Twelve Miles Deep and Would the Sum of \$25,000,000.

The Hon. Charles Algernon Parsons, the English inventor, who developed the steam turbine and made it suitable for the generation of electricity.

veloped the steam turbine and made
it suitable for the generation of electricity and the propulsion of war and
mercantile vessels, addressed the engineering section of the British Association for the Advancement of
Science at Cambridge, England, the
other day. Premier Balfour, who is
President of the association this
year, on behalf of the Associated
German Engineers, presented a gold
medal to the President of the section, Mr. Parsons, in recognition of
his merits as an inventor.

Mr. Parsons' address was a long
and interesting one, dealing with inventions and patents. He urged that
greater encouragement, assistance
and protection be given the British
inventor and patentee by the State
along the lines adopted by Germany
and the United States. He strongly
advocated changes in the patent laws
of all countries, especially in regard
to an extension of the time limit,
but he pointed out that it would be
useless for Great Britain alone to
make these changes if capitalists
were to be induced to invest undertakings dependent woon patents from
which the world would reap immense
benefit.

As an illustration, Mr. Parsons

which the world would trap benefit.

As an illustration, Mr: Parsons gave details of a scheme for the sinking of a shaft to a great distance in order to explore the lower depths of the earth. He submitted estimates of the cost and the time of sinking a shaft from two to twelve miles. To sink the shaft to the latter depth, he said, would cost \$25,000,000 and take \$5 years. If such an undertaking depended upon a patent it would under the present laws be impossible to secure the necessary be impossible to secure the necessary

Mr. Parsons suggested as a solu-Mr. Parsons suggested the tion of the problem the placing of the question of life patents under the control of a central international control of a central international committee which would apportion the life privileges, thus insuring the prolongation of patents and making them of international application. He advocated the grant of a fair ontrol of a central monopoly to those who pledged themselves to spend a minimum sum within a stated period in research in order that they might research in order er that they might reap a reasonabl

Preventing Early Frost.

It has long been known that clouds prevent frast. The theory is that they form a blanket to retain the heat. In France last autumn this fact was turned to account. Artificial clouds have been made from smoke. One of the American Consuls thus reports on the subject:

tificial clouds have been made from smoke. One of the American Consuls thus reports on the subject:

"M. Bignon has recently addressed to the French National Society of Agriculture a note giving interesting information on the efficacy of artificial clouds in preventing frosts. For many years he has successfully practiced this. His vineyard thus protected covers about fifteen acres and is divided into five parts, separated from east to west by walks twelve to fifteen feet wide and circled by an avenue of equal width. These walks facilitate the placing of the fires, which are built in a small basin sunk into the earth and filled with fifteen or twenty pounds of resinous matter and some pieces of pine and other vegetable debris. The basins are some fifty feet apart.

basins are some fifty feet apart.
"In 1903 the frosts were very
heavy for a week, and recourse was
had four times to artificial fires.

had four times to artificial fires. The total expense was \$400. The effect is stated as having preserved 25 per cent. of the harvest, or some 125 or 150 barrels of wine.

"It is stated that any substance can be burned which gives a thick and abundant smoke, such as green herbs, moss, damp straw, tufts of grass, etc., but best results have been obtained in France by the heavy oils which are the residues of gas."
This fact will prove of great interest to Canadian farmers, especially est to Canadian farmers, especially to market gardeners and growers of vineyards. Jack Frost can be liter-ally smoked out.

Perfect Autumn Condition. Every veteran fruit grower knows that to have a tree in perfect condi-tion—say, for instance, an apple or tion—say, for instance, an apple or a pear or even a peach tree—it should discontinue its growth at, say, along in September, but after that if it ripens up its wood and holds its foli-age until the frost takes it off it is

who will yet write to Mrs. Jno. C. Huffman of this place. Mrs. Huffman suffered as they are suffering now. She discovered a cure in Dodd's Kidney Pills; and she is breaking the law of secrecy that binds the great majority of womankind to let her suffering sisters know where they may find relief. Mrs. Huffman Says:

"I was troubled for about six years with Kidney Disease and the pain was so great I could hardly bear it. Fould not entertain any 'company. One night when I was feeling very miserable I read of some wonderful cures by Dodd's Kidney Pills and resolved to try them.

"At this time my urine was something terrible and at times very disagreeable to pass, but Dodd's Kidney Pills soon brought me relief from all my troubles and by the time I had taken six boxes I was completed. If its sheds its leaf early in flued. There is some weakness or a fungus is attacking the leaf.—Charles Black.

Profit is Swise.

Stock boars two to three years old are the best. Good brood sows should be kept for years, says American Agriculturist. Select the best type and next the best mothers. Swine if properly handled should pay as well as any other stock. The prices and the demand have both been good for some time. If we raise the right kind for the markets the demand will increase.

Cost of Fattening Cattle.

"I am making this statement to Stock boars two to three years old are the best. Good brood sows should be kept for years, says American Agriculturist. Select the best type and next the best mothers. Swine if properly handled should pay as well as any other stock. The prices and the demand have both been good for some time. If we raise the right kind for the markets the demand will increase.

Many persons are of the opinion that the gain in weight from the in-ception to the conclusion of the feedception to the conclusion of the feed-ing experiment must pay for the cost of the food or else cattle feed-ing is an unprofitable business. This is not true and can never be true, but is one of the fallacious notions that are liable to spring up from nowhere and confront any industry.— Professor Soule in Breeder's Gazette.

Queer Places for Birds' Nests. Queer Pieces for Birds' Nests.

Birds have been known to nest in letter boxes regardless of the mail that was unceremoniously dropped in on them. Two wrens once chose an old hat hanging on a nail eutside a barn where laborers were going to and fro all day. An empty fruit basket which had been tossed into a tree was the home of another family of birds.

* . *

The Work of the Heart Whether it be true or not that the Egyptians 4,000 years B. C. discovered the true functions of the heart and thus anticipated Harvey, it certainly is true that Michael Servitus, whom John Calvin burned to death at Geneva in 1553, in his treatise, "De Trinitatis Erroribus," published in 1533, first maintained the imperviousness of the septum and the "transition of blood from the right ventricle by the pulmonary artery to the lungs, thence by the pulmonary veln and left auricle and ventricle and the aorta to all parts

of the body." More than eighty years later Harvey, taking up the work of that great physiologist, completed it, and in his work, "Exercitatis de Motu Cordis et Sanguinis" (1628), promulgated to the world his discovery of the true func-tions of the heart and of the regular and periodic circulation of the blood, and it in nowise derogates from his fame or the merit of his discovery to say that it was Michael Servitus who pointed the way to this discovery for

Horseflesh and Beef. "Here are some means of distinguishing between horseflesh and beef," said

a meat inspector.
"Raw horsefiesh is a brownish red in color, whereas in raw beef there is no brown. Raw horseflesh is soft and tenacious. Touch it, and the finger sinks in, while as you withdraw the finger the tissues rise with it and cling to it, as though intermixed with glue But raw beef is not soft nor tenacious in this way. Raw horseflesh, further-

more, has an odd, metallic smell.
"Cooked horseflesh is denser than beef. It is as dense as a lump of cheese. In taste it is sweet—a sweet-

ness sickening, to my mind. "The best test for horseflesh is to take a piece of the fat and melt it. Horse fat will melt to a clear oil at so low a temperature as 70 degrees F., but beef fat won't melt to a clear oil under a temperature of 112 degrees,"

The Gallery Gods' Applause. Lawrence Barrett once told of a conversation he had with Edwin Booth, The latter had been congratulated upon an ovation given him by a crowded house on the opening night of an en-gagement. "The sweetest music to my ears," said the great tragedian, "is the shouting of the boys in the gallery. I know they are not applauding because I have a reputation or because they wish to make a display. They simply give vent to their natural enthusiasm. When they shout I know that I am giving a good performance. As for the parquet, it may clap its hands out of politeness. A dramatic critic who had certain notions as to how a line should be read will applaud if I read it his way; otherwise he will remain quiet. I can never analyze the applause of the front rows, but the gallery is sincere in its likes or dislikes."

Memory of Sleepwalkers. The memory of sleepwalkers is ex traordinary, not to say phenomenal especially when under the peculiar impulse of the disease which prompts their movements. Moritz gives an instance of a poor basket maker who was unable to either read or write, yet, strange as it may appear, when in one of his somnambulistic vigils he would preach fluent sermons, some of which were recognized as having formed parts of discourses which he was accustomed to hear when he was a child attending his parish church forty years

Coffee a Disinfectant. "Drink plenty of coffee if there is sickness around you," said a physician. "Coffee is a good preventive of typhoid fever and cholera. This has been proven. Cholera germs and ty-phoid germs have been thrown into coffee and the aromatic drink has not once failed to kill the germs within an hour. Hence, amid contagious con-ditions do not neglect, among your other precautions, to drink three cups of strong coffee at each meal."

Fond Mother—I am not surprised, Edith, that young Mr. Highmus pre-fers your society to that of Kate Gar-linghorn. She may be more dashing and coquettish, but she is far from be-the your sornal in the and wing qualiing your equal in the enduring quali-ties of intellect and culture. Miss Edith—Yes, that's where I've got the bulge on poor little Kit.

Wit that wounds is the cruel surgery of speech.

The faultless man is usually friend-

VERANDA HOSPITALITY.

Suggestions For Allurius Breakfasts

In summer days the veranda should constitute a continuous "living room," and here may be presented at times, if not permanently, the family breakfast,

luncheon and 5 o'clock tea. When the children's appetites begin to lag, as often happens during the summer, the distressed mother will find gratifying results through offering a dainty, alluring refection on the home porch, advises the New Idea

Suggestions for breakfast on the veranda in summer days may be made as follows: Fruits—berries, apricots, melons, pears, peaches, grapes, varying these frequently; cereals of light character, cooked and uncooked, dispensing

with oatmeal until colder, weather. The chafing dish may be brought into service in presenting such features as stewed kidney; tripe, creamed or a la lyonnaise; smoked beef, creamed or with scrambled eggs; minced ham on toast, creamed codfish, scrambled eggs and tomatoes, eggs in various forms

and omelets of ham, parsley and rice. Water cress should become a staple accompaniment to this season's break-fast; crisp radishes and cucumbers may be served too. "Popovers," light breakfast mushins, breads, toast of entire wheat bread, etc., should be pre-

sented. Where the breakfast does not include meat, the following formula will give a nutritious, inviting, satisfying feature: Make a batter as follows: Mix a table spoonful of butter with half a cupful of soft boiled rice; and the yolks of two eggs, well beaten, and a cupful of milk; sift in next half a cupful of flour, a tablespoonful of yellow cornmeal and a very scant teaspoonful of Add a dash of salt to baking powder. the whites of two eggs and beat to a stiff froth. Fold this in quickly and lightly to the remainder of the mix-Pour into small layer cake pans and bake in a hot oven until a golden brown, which will take from twelve to fifteen minutes. Remove one of the layers to the serving plate, bottom side up. Butter well over the entire surface. Place another layer over this and butter generously as you would spread jelly on a layer cake. The top layer is to be placed top side up and also well buttered. Cover all with a deep dish and place in the oven until

ready to be served.

Toothsome Dishes With Corn. A toothsome baked corn pudding calls for one quart of scraped corn pulp, for one quart of scraped corn pulp, four eggs, three tablespoonfuls of flour, one pint of milk, one teaspoonful of salt, one-third of a teaspoonful of pep-per and one heaping tablespoonful of butter. It is baked in a moderate oven until set in the center. The same compound, without the flour and milk, may be used as a filling for tomato and pepper shells, says Table Talk. The old Indian name of succotash at once reminds us of tender little lima beans and corn pulp cooked together. Some cooks like to add to this a slice or two of salt pork or fat bacon, but this addition is better applied to the dried or canned article than when brought in fresh from the truck or kitchen garden. When left over on the cob it may be cut off, highly seasoned with salt and pepper, mixed with a white sauce, turned into a dish, covered with buttered crumbs and baked as a scallop, or the corn and sauce, after ten minutes of slow cooking, can be poured over dipped toast. Again the cut corn can be mixed with an equal quantity of thick batter made with flour, milk, baking powder and one or two eggs and cooked as fritters. Where uncooked pulp is used for this dish very little milk will be needed, especially if the corn is young and julcy.

Latest Fancy Work.

Hardanger, or Norwegian, embroid-ery is largely composed of the lace stitch known as "binding" in the open parts. The solid portions are done in satin stitch, taken in accordance with the canvas-like ground. The openwork is produced by drawing the threads as indicated in the design and in cutting indicated in the design and in cutting out spaces. Considerable accuracy is necessary to cut the squares correctly. The work thus becomes a sort of combination of "cut" and "drawn work" and is very effective and strong. It is entirely dependent upon the gr material, however.

Bertha-Are you and Miss Kelcher Bertna-Are you and Miss Keicher relatives, Bessic? ? Bessic-Well, no; I suppose you'd hardly call us that; although we have been proposed to by the same

Dignity and love do not blend well, nor do they combine long together.
