Does the preferential tariff encourage British trade?

The trade and navigation tables of the Dominion of Canada, containing the values of imports entered for consumption and of exports for the fiscal year ended June 30, 1902, have not yet been published, but the usual unrevised statement for that year is before us. The figures published in this report are as far as possible, revised each month, and are therefore substantially correct, and near enough so for the purposes of this article.

The following table embodies the enumeration of 100 dutiable articles selected from different classes of goods imported into Canada, and their respective values, showing their source of origin, first from Great Britain under the preferential tariff; second, from the United States under the general tariff; third, from all countries including Great Britain and the United States; and fourth, the duty imposed upon them; and it should be borne in mind that the duty upon the British goods under the preferential tariff is only two-thirds of that imposed upon imports from other than British countries. There are hundreds of other articles enumerated in the report of the same character as those here named.

The countries of origin, values, and proportions of the whole value of these 100 different articles may be classified as follows:

Country.	Value.	Proportion.
Great Britain.....	\$18,747	0.2 per cent.
United States.....	10,306,584	96.6 "
All other countries.....	385,875	3.2 "
Total	\$10,661,206	100.0 "

No article enumerated in the list as having been imported from Great Britain under the preferential tariff amounts in value to as much as \$1,000; and of the 100 articles enumerated, only 67 came from that country.

These facts are further illustrated in the following table:
