CHAPTER I.

PAGE

INTRODUCTION.	1
A typical glacier Variations from the type The term "glacier" indefinite.	
LEADING CHARACTERISTICS OF GLACIERS	2
Mode of accumulation. — Rate of flow. — Three types of glaciers: alpine, piedmont, and continentai. — Divisions of the surface of a glacler, névé and glacler proper. — Banded structure. — Glacler grain. — Moraines: lateral, medial, terminal, and frontal. — Crevasses. — The starting of crevasses. — Bergebrunds. — Ice falls. — Marginal crevasses. — Surface features: glacler tables, sand cones, débris pyramids. — Melting and drainage; super- glacial and subglacial streams. — Characteristics of streams flowing from glaclers.	
WHAT IS A GLACIER?	16
GLACIAL ABRASION .	18
Worn and striated rock surfaces.	10
SMOOTHED AND STRIATED SURFACES NOT PRODUCED BY GLACIERS	19
SPECIAL FEATURES OF GLACIATED SURFACES	20
GLACIAL DEPOSITS	22
Lateral moraines. — Perched blocks. — Terminal moraines. — Morainal embankments. — Frontal moraines. — Interlobate moraines. — TIII. — Boulder clay. — Drumlins.	
GLACIAL SEDIMENTS	28
Osars Kames Sand and gravel plains.	
CHANGES IN TOPOGRAPHY PRODUCED BY GLACIERS	30
CHAPTER II.	
GENERAL DISTRIBUTION OF THE GLACIERS OF NORTH ANERICA	0.0
Cordilleran region Greenland region.	32
CHAPTER III.	
GLACIERS OF THE SIERPA NEWADA	
THE HIGH SIERRA	37
Southern limit of glaciers in the United States.	37
MOUNT DANA GLACIER	80
MOUNT LYELL GLACIER .	39
PARKER CREEK GLACIER	40
