WAR EAGLE STRIKE

The Country is Better Minera ized With Depth.

PAY SHOOT ON EIGHTH LEVEL

Amply Justified-Two Ledges Above flui tiply to Five Below-An Important Find

It was bruited on Columbia avenue late esterday afternoon that a strike of some pportance had been made upon the wa. Magie. Reference to the general manager. Mr. E. Kirby, elicited the reply that he had nothing for publication on the matter and did not wish to deny or athrm

important, inasmuch as it confirms the theory on which the management of the mine has been working for he past year which was that the veins on the surface which had been followed down through the various levels and which narrowed as depth was gained, and which narrowed as depth was galacter would again widen out as still greater depth was attained. Hence the manner in depth was attained. Hence the manner in down between 23 and 28 cents. deepening of the shaft, even at the sacrifice of other development work. It is only early in this season that the shaft was sunk to the seventh level and it was only last week that the beginning of the work on the eighth level was started. In spite of the fact that the mine had gained two new levels for development purposes the shaft has still been pushed and great efforts have been made to for ward the sinking as rapidly as possible: Some records have been established for the camp during the progress of the It is well-known that the middle levels

factory, and although the sixth level was an improvement, yet the seventh was not quite as good as was expected, and the 5 cents. sinking was strenuously pushed in order that the levels below might be opened. It will be well to recall the position of the main ledges of the mine and the man- yesterday for 3 cents. ner in which they have been worked. In order to do this a reference will be necessary to the seventh level. Here the shaft came down between the two main venns, the north and south, but not equi distant from them. From the north vein the shaft is situated about 30 feet, but the south is over 130 feet away. On opening the level a lateral drift was made from the shaft running between the two veins to the eastward for 60 feet and crosscuts were then made to the north and south to intersect the two ledges. That to the morth was found in place and was drifted upon. To the west a fine body of ore was found which has been raised upon. On prosecuting the crosscut to the south at a distance of some 35 feet short of the south vein, an intermediate vein was tound which did not appear on the levels above. This was explored and at the same time the south vein was properly prospected. Here the use of a diamond drill located yet another ore body to the south of the vein and a crosscut is being run from the west drift in order to open this up. In other words, the veins on the seventh level are four in number as against two on the levels above. This has shown that the mineral zone of the mine has really improved with depth.
The values here obtained have not been divulged and have been said to be not as good as were anticipated. This may or

may not be the case. On opening the level at the 1,050-foot point last week the lateral drift was started as in the level above. This drift is to be found here. Yet this week in this drift another vein has been found which is stated to carry quite as good values as any in the mine. This, therefore, not only indicates that the ore bodies found above will be found below, but that yet more are to be discovered on the level and that these ore bodies will not only be far more extensive than those above, but will also give better values.

If these indications are found to be borne out by further development, the War Eagle will be a greater mine than was ever before supposed, except by its firmest friends. There being so much hanging on the issues of the development of this level and of the level below which may be expected to be reached some time in December next that there is little surprise to be manifested at the fact that the management is chary of committing itself to any definite statement in the matter. It is believed, however, that when the

report to the shareholders is made next December that the facts as herein set forth December that the lace will be substanially confirmed.

THE STOCK MARKET.

The Sales for the Week Aggregated 104,-500 Shares.

The stock market continues fairly active with a steady demand for the standards. The sales for the week which ended yesterday aggregated 104,500 shares, which is less than for the previous week, when they aggregated 144,500 shares. The falling off was largely due to the Thanksgiving day festivities, and in consequence of this there were no sales reported on Thursday and on Saturday. Brokers say they look for flurries two or three days a week until the holidays set in, and then there is always a period of from four to tix weeks, during which but little business is transacted; at least this has been the experience of the market for several years past, and there is no reason to presume that the present holidays will be different from the previous ones in this respect. As soon as the holidays are well over, however, it is anticipated that business will continue good for the remaind :

One good feature of the present situation is that the stocks of properties like the Spitzee, White Bear and others of the same kind, which, during the denression brought on by the war in South Africa, were but little handled, are now in such demand that operations can be resumed upon them. Another gone al sign is that a number of mining operators, who left here from a year to three years since, are teturning and are looking for properties

In addition to this the representatives of British capital are here quietly looking for properties for their clients. This is the result of the great success that is being met with in the mines of this and other divisions. The outlook, therefore, is that the year 1901 will witness one of the greatest revivals in mining affairs that British Columbia has ever experienced This will be reflected on the stock market and the volume of transactions promises to be very large during the coming year The sales by days during the past week

Giant has sold during the week to the extent of 30,000 shares. It opened on Thursday at 31-4, tell to 3, rose to 314, eighth level or 1,050 foot level and and yesterday it sold for 3 cents. Work on the Giant continues with vigor, and though the roads are soft from the rains, still it is thought the mine will send the

usual quantity to the smelter this week.
There were 14,500 Rambler-Cariboo sold to 27 cents, and fell to 25 1-2 to 26

There were 27,500 shares of White Bear sold during the week, and the price ranged from 3 to 31-4 cents. The unwatering of the White Bear workings began on Monday, and in about two weeks diamond drills will be in operation looking for the ore body which is supposed to be in the northern portion of the mine. It is the expectation that an ore body will be found that has caused the renewed demand for the shares of the White Bear. It should not take a great while to demonstrate whether or not this theory is correct.
There was a sale of 5,000 Butte & Bos

of the mine were not particularly satiston for 23-8 cents. Tamarack is not moving very much, but one sale of 3,000 shares was made for

There is considerable of a demand for The party of engineers engaged in making Homestake, but most of the sales are the location survey of the proposed railmade off the board; 1,000 shares were sold way between Grand Forks and Republic

only 1,000 shares were sold for 6 cents.

The development of this property is being Warner Miller of New York and Clarence pushed and considerable ore of a good J. McCuaig of Montreal.
