

Thousands of Corn Growers have increased their crops 20% by using "Cockshutt" Corn Planter

You can benefit by their experience. You can do the same as they have done with this valuable crop.

If we can show you a way to take \$100 out of your land where before you only took \$80.00, don't you think it will pay you to investigate?

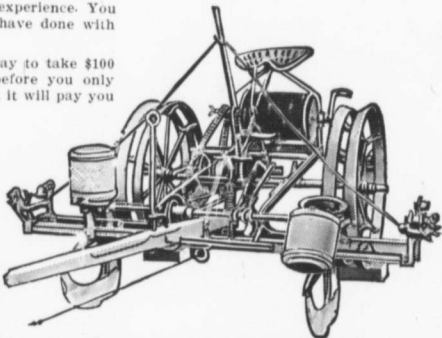

This Corn Planter Really Will

Increase your crop to that extent. You know that the soil in any field is never uniform in strength. Yet very often no attention is or can be paid to this most important fact. The result is that in some parts of the field the corn does not grow as well as in others

With a "Cockshutt" planter you can change the feed so that in the poorer parts of the field the soil is not overtaxed. And you can do this without leaving the driver's seat or stopping the team.

The New Special Feature of this Planter

is that you get not only an accurate number of kernels in each hill, but the operator can regulate the number of kernels to correspond with the quality of the soil. In this way a better chance is given all seed to attain perfect maturity. This is done by means of a

Variable Drop

which, without stopping the team, can be adjusted to plant 2, 3 or 4 kernels to a hill. Also without stopping the team the machine can be changed to drill 7½, 10 or 15 inches, 9, 12 or 17 inches, 11, 14 or 22 inches apart.

The planter can also be set to place the drills at the following distances apart 3 ft., 3 ft. 2 in., 3 ft. 4 in., 3 ft. 6 in., 3 ft. 8 in.

If you use good seed you need have no fear of the results.

"COCKSHUTT" is the First Name

to think of for implements. If our catalogue isn't in your hands send us your name and address to-day. Then you'll be sure to get the implements you need, and that stand for life-long service and best results.
