

# THE JOURNAL OF EDUCATION.

Devoted to Education, Literature, Science, and the Arts.

Volume XIII.

Quebec, Province of Quebec, June, 1869.

No. 6.

## TABLE OF CONTENTS.

### EDUCATION.

	PAGES
The Teacher is the Book.....	97
Mr. Froude's Inaugural Address at St. Andrew's University.....	98
Individual or Class Teaching.....	99
An Error Illustrated.....	100
Compound Words.....	101
Language and Grammar.....	101
Romes.....	"
The Result of Application.....	"
Manners.....	"

### LITERATURE.

Poetry: Dismissed.--If?.....	102
Canadian History,—Memoirs of the Richelieu.....	103
The Queen's Pedigree.....	104
Foreign Faces.....	"
How to retain a Good Face.....	"

### SCIENCE.

Progress of Astronomy in 1868.....	104
The Coming Transits of Venus.....	106

### ART.

New Uses of Aniline.....	107
Photographs in Quinine.....	"

### OFFICIAL NOTICES.

Appointments: School Commissioners and Trustees.....	"
Diplomas Granted by Boards of Examiners.....	108
School Wanted.....	"
Donation to the Library of Public Instruction.....	"

### EDITORIAL.

The Gilchrist Scholarships.....	"
Educational Reports: Massachusetts, Michigan, Wisconsin, New Jersey, Connecticut, Indiana, and Ohio.....	110
Books and Exchanges Received.....	"

### MONTHLY SUMMARY.

Educational and Meteorological Intelligence.....	111
Advertisements.....	112

## EDUCATION.

### The Teacher is the Book.

That the Teacher is the school, we find to be true in more than one sense; of course not in the full sense of the word, there

being, besides the teacher, some more constituents necessary for the full reality of a school—as, for instance, the pupils, the building, the school system, and its administration. But that the teacher ought to be the text book, is true in the proper sense of the word. The best school is that which makes the least use of text-books, the teacher filling their place.

The term text-book does not here apply to reading-books of whatever kind; no school can do away with these. But it applies to all other kinds of books which are commonly used in schools. Of these we hold that they ought to be replaced by oral teaching, and recitations by oral repetitions. It is no new theory which we here proclaim; it is the Pestalozzian system, as spread all over Germany and Switzerland, and tried and proved in half a century's practice of the reformed schools there.

On the other hand, the Anglo-Saxon system of teaching as practised in Great Britain and the United States, is book-teaching. Whenever any of the Sciences is to be taught in school, the teacher singles out a chapter of the text book introduced for learning by heart. The better class of teachers will, on this occasion, explain the contents of the chapter, or they will do the same thing after recitation—which is worse yet. The pupil has to recite his task, and a new chapter is committed to memory; and so on till the book is gone through. If there are practical examples given in the book, as for instance in all books of arithmetic, the pupil has to solve them, as well as he can, with, or without, the aid of the teacher—in a few cases in school, but on the whole at home. It strikes us that the teacher plays here a very subordinate part, and a machine might be invented to supplant him, in most cases; for hearing a recitation, and pronouncing a judgment on its perfection or imperfections, might generally be just as well performed by the better pupils of the class. The text-book here is almost everything, the teacher almost nothing or nobody. The pupil is passive and merely receptive; he is not guided to reproducing the matter to be mastered out of himself, to becoming active and independent. The matter is not developed in his mind, nor his mind developed through, and with the matter. It is only the best talent, a very small percentage of boys and girls, who will in this way become tolerably proficient in the science to be acquired; because only a very few have the mental capacity which is self-instructive, which digests mental food in whatsoever sauce served up. The balance of the pupils
