

Bearberry (*Arctostaphylos uva-ursi*); superficially they resemble dark specimens of *altus*, but structurally they could not be separated from *cumulatus* with the material in hand.

They are shorter and heavier than *cumulatus*, with short broad elytra which just cover the abdomen. In colour they are a much darker testaceous, shading to fuscous.

*Phlepsius albidus*, n. sp.—Small, pale greenish white, resembling *Eutettix insana* until closely examined, slightly more robust. Length 4.5 mm.; width 1.25 mm.

Head as wide as the pronotum, vertex flat, slightly sloping, slightly but distinctly angled before, a little over half as long as its basal width, two-thirds the length of the pronotum; front convex in both diameters, scarcely narrowing until just before the apex; elytra moderately long, compressed behind, the claval nervures straight.

Colour: vertex face and scutellum pale, creamy yellow; pronotum with a greenish cast; elytra white, with fine, almost microscopic, greenish fuscous irrorations, a dark point at apex of clavus and a pair at the outer angles of the loræ; beneath greenish white.

Genitalia: ultimate ventral segment of the female about twice longer than the penultimate, posterior margin slightly rounding, two small rounding lobes faintly outlined at the centre.

Described from four females taken at Pueblo, Colo. In the white colour and the greenish character of the irrorations this species is very distinct from any before described.

*Eutettix insana*, n. sp.—Form of *modesta* nearly, but smaller, pale, slightly greenish, white, peppered all over, thickest on the elytra, with small round black specks. Length, ♀ 4 mm., ♂ 3.25 mm., width 1 mm.

Vertex nearly flat, a third longer in the middle than at the eye; three-fourths as long as the pronotum, two-thirds as long as its basal width, rounding to the convex front, which is slightly expanded below the antennal pits, clypeus convex-margined above; elytra moderately long, flaring as in *modesta*, venation rather weak, the claval nervures either coalescing or tied across in the middle.

Colour: vertex and face pale greenish orange, vertex with a few small spots; pronotum olive with scattered dark dots; elytra white, sprinkled all over with small round dots which appear to be on the surface, all below white, somewhat dotted on legs, connexivum and pygofers.
