KINGSTON SCHOOL OF MINING AND AGRICULTURE

The Governors of this School of Mining, aided by the Legislature, are providing a staff and equipment worthy of a Province so rich in mineral wealth as Ontario. The objects of the School are, to give a complete scientific education, both of a theoretical and practical character, to young men intended for metallurgists or mining engineers; to give short courses of practical instruction during the winter to prospectors, mine foremen and others interested in the discovery and winning of minerals; to lead prospecting excursions of the students, as well as of those more directly interested in the development of mineral lands; and to make a geological survey of our mineral region.

The Staff will consist of a Professor of Chemistry, assisted by Demonstrators; a Professor of Geology, Petrography, and Ore Deposits; a Professor of Mining Engineering and Ore Dressing; a Professor of Mineralogy, Assaying and Metallurgy; Lectures on Mechanical and Freehand Drawing, and Surveying, Levelling, etc., as applied to Mining.

Instruction in the allied subjects, needed for a degree, of Mathematics, Physics, French and German, Botany, Animal Biology and Paleontology can be obtained in the University, the buildings being contiguous to the Carruthers Hall, which the Governors have leased.

The Calendar will be issued in September, and can be had from the Secretary, Geo. Y. Chown, B.A., Kingston.

The School of Mining opens on October 9th, 1893.

J. B. CARRUTHERS, *Chairman*,
Board of Governors.
