Showing that during the years 1872 and 1873, while his leader, the right hon. member for Victoria, was in power, 24,022 more emigrants passed through Canada into the United States than in the next five years. What was the policy of this Government in reference to emigration? He was informed that the Minister of Agriculture and Immigration had abandoned the scheme, and dismissed his emigration agents in Europe. If such were the case, he regretted it very much, because now was our portunity to take advantage of the depression which existed in Great Britain among the tenant farmers of that country, and induce them to settle in this Dominion, where they could procure the fee simple town estate for the rental of a farm in Great Britain for one year. The hon, member for Cardwell seemed to think there was prosperity at present, even in the United States. He would wish it were so. Does the hon. gentleman know there were at present thousands out of employment; that there were half a million clamouring for bread in Boston and other cities of the American Union? Our commercial relations being so closely identified with that of the United States, it was natural to suppose that we should suffer in consequence of that great financial panic that swept over that great country. He (Mr. Trow) believed that it was beyond the power of any Government to bring about prosperity by any such policy as now proposed. Could the people be enriched by taxing the large majority for the benefit of the few? If the taxes fell equally on all, it might be supposed that the Government was anxious to do what was fair and right. Would any one be uncandid enough to say that the farming interests had received any consideration, further than increasing their burdens? What had been done to benefit them? Had not his taxes been increased, by higher duties on every article he used? The
