

The numbers refer to the articles.

- DIFFERENTIATION.** Method applied to find attractions, 92.
- DIP.** Tangent is twice that of the magnetic latitude, 324.
- DIRECT DISTANCE.** Magnitude and direction of attraction, 7, 8.
- DISC.** See **STRATUM, PLANE CONDUCTORS.** Attraction of a circular disc at a point on the axis, 21. Attraction of an infinite disc, 22. Table-land, 23. Elliptic disc at focus, 30. Elliptic disc at any point, for the law of the inverse cube, 29. Rectangular disc, 30. Disc bounded by two parallel lines, 30. Confocal level surfaces, 51. Infinite heterogeneous disc, 93. Elliptic discs, special laws of density, 228. Any law of density, 251, 252. Condition that the level surfaces are confocals, 253. Electrified elliptic disc, 382. See **ELLIPSOIDAL CONDUCTOR.**
- DYSON.** Anchor ring, 193. Ellipsoids, 247, note.
- EARNSHAW.** Points of equilibrium are unstable, 119.
- ELECTRICAL PROBLEM.** Enunciation, 372. Green's method of solution, 154, &c.; another proof, 393, &c. Method of inversion, 168, &c.
- ELLIPSOID.** Potential of a solid ellipsoid at an internal point, 211, &c. and Note C, page 358. At an external point, 222, 225. Other laws of force, 215, and Note D, page 359. Level surfaces, 216. Spheroids, 219, 220. Heterogeneous, with similar strata, 239. Any law of density, 245, 247, Note E, page 360. References, 248, note. Nearly spherical ellipsoids, first and second approximations, 220, 221. Potential of a magnetic ellipsoid, 330. Induced magnetism in an ellipsoid, 331.
- ELLIPSOIDAL CONDUCTOR.** Surface density $Mp/4\pi abc$, 376. Quantity on a portion of the ellipsoid, 377. Potential, 378. Only one arrangement, 381. Elliptic disc, 382. Quantity on the portion bounded by parallel chords, 385. Insulated rod, 385.
- ELLIPSOIDAL SHELL.** Internal attraction of a homoeoid is zero, 68. The converse theorem, 73. Attraction at an external point close to the surface, 71, 209. Theorem on the polar plane of an external point, 89. Potential of a homoeoid at an internal point, 198. The fundamental integrals I and J , 200. Potentials of confocal homoeoids at corresponding points, 203. Level surfaces, 205. Lines of force, 207. Thin homoeoid, external point, 208, 209. Linear and quadratic law of density, 231. Any law, 247.
- ELLIPTIC COORDINATES.** Poisson's theorem, 110. Potential of an ellipsoid, 230; of an elliptic disc, 251.
- EQUILIBRIUM.** Points of equilibrium are unstable, 119. The separating cone, 120. Level surfaces near a point of equilibrium are quadrics, 120. Repelling particles lie on the surface of the containing vessel, 121.
- EQUALLY ATTRACTIVE BODIES.** Bodies attract equally if their potentials are equal over an including surface, 129, &c. Also, if of equal mass and have the same level surfaces, 131. Their centres of gravity and principal axes coincide, 136. A prolate spheroid and a straight line, 228. Discs and homoeoids, 228.
- EVERETT.** Units of attraction, 6. Referred to, 363, note. Numerical values of magnetic force, intensity and permeability in soft iron, 473.
- FARADAY.** Magnetic induction, 342, note. Dielectrics, 465, note.
- FERRERS.** Attraction of a stratum, 94, note. Heterogeneous ellipsoids and ellipsoidal shells, 245. Spherical Harmonics, 248, note. Electricity on spherical bowl, 451, note. Expression for $\int P_l P_m P_n dp$, limits ± 1 . Note G, page 361.
