FIRST EDITION. THE EXPLOSION.

MR. GEORGE WARRING REPEATS HIS STATEMENTS MADE BEFORE THE CORONER'S JURY.

He says the boilers of the South Bay Mill were weak, and gives a full explanation of his theory—some facts for the jury to think about. The witnesses who testified with these facts were:

The features of the inquiry at South Bay yesterday were, first, the coroner's inquest, which he summed up the whole evidence, and put marked emphasis on the "common sense" portion of the evidence, the verdict returned by the jury. Some of the expert witnesses are satisfied with the finding of the jury, and are moreover very much satisfied with the manner in which the enquiry was conducted. Mr. Warring makes the statement that he was put on the stand, and interrogated by those who knew nothing about boiler engineering or boiler inspection. In his evidence he said that the explosion could be caused by the following pressure, and was met by the following question: "If 20 pounds pressure will throw a boiler into the bay how far will 20 pounds pressure throw it?" He offered to prove all his evidence by calculation, but he was not given an opportunity.

Today the Gazette gives him that opportunity, and it must be said that he has strong proofs to substantiate all that he says. A few days ago the reporter of the Gazette interviewed Mr. Douglas Stevens, a member of the provincial board of steamboat inspection, and while Mr. Stevens did not wish to be quoted as making any direct statement, it is only fair to Mr. Warring to say that his evidence agrees with what Mr. Stevens thinks about the matter. Both are engineers of long standing, practical men, and authorities on the question of boiler inspection. The interview with Mr. Stevens published in the Gazette, showed that in all his experience he had never seen what might be termed a boiler explosion from (1) lack of water, (2) running water in a red hot boiler, (3) too much water in a boiler, (4) too much steam, (5) too much pressure, (6) too much heat, (7) too much fire, (8) too much fuel, (9) too much coal, (10) too much wood, (11) too much
