TAL Reagent (Tachypleus Amebocyte Lysate)

TAL is a biological reagent prepared from amebocyte of chinese horseshoe crab *Tachypleus tridentatus*. TAL Reagent is very sensitive in reacting with pyrogen or endotoxin of gram-negative bacteria to form gelation. It is used for detecting endotoxins contaminated with the parenteral drugs, biologicals and radiopharmaceuticals, and in clinical diagnosis as well as for detecting body fluids contaminated with endotoxins from gram-negative bacteria infections. All materials required (such as normal saline, 0.1N HCl/NaOH and glassware) must be pyrogen-free. Drain 6.1 ml. of saline into TAL containing ampoule, add 0.1 ml. of sample solution (adjust PH to 6.8 - 7.2) and mix thoroughly. For negative control drain 0.2 ml. saline only, and for positive control drain 0.2 ml. endotoxin reference solution containing 10mg./ml. put the ampoules into a 37°C waterbath for 1 hour, take out and tilt them to 90°C, and then inspect for degree of gelation. A firm gel may be scored as positive reaction. TAL Reagent should be stored below 10°C. The expiry date is 1 1/2 year after delivery. Chinese Standard Reference endotoxin of *E. coli* 0111B4 in ampoule is supplied on request.
