WIT AND HUMOR

Sir Henry Johnston, the African explorer, praised in Washington the innumerable and superb American golf courses.

"I never saw anything like it," said he, "and I have but one fault to find. You permit too many persons to promenade your links as though they were public parks. This is very annoying and also very dangerous."

"These promenaders are often extremely ignorant of golf. It was here in Washington, I believe, that a player overheard two of them conversing."

"What," said a young lady promenader, "is that man with the club shouting 'Fore' for?"

"Her companion, another young lady, answered:

"I suppose that is the number of times he has missed the ball. And doesn't he seem annoyed about it, too?"

"Father, I wish I knew why they laughed at my corrected sentence in English class to-day!" exclaimed a High-school girl recently, says the Youth's Companion. Her father looked up from his evening paper and asked what the sentence was.

"Well, Miss West gave us each a sentence to correct, and mine was, 'I went to the tonsorial parlors to get a hair cut.'"

"And how did you correct it?" asked the father.

"Why, I corrected it the only way you could correct it, of course; and Miss West just doubled up laughing when she read it, and then she read it aloud, and every one in the class shouted. They didn't know it was my sentence, but I did."

"But what did you write?" "Why, father, what would anyone write? I wrote, 'I went to the tonsorial parlors to get my tonsils cut,' of course!"

Another of Egan's duels was fought with Curran. Egan, as already said, was a stout, bulky man, and on coming to the ground he complained that Curran had an unfair advantage over him, for whilst he himself was as big as a turfstake, Curran was as thin as a blade of grass.

"Oh, Mr. Egan," said Curran, "I have no desire for anything that might be considered unfair. Let my size be chalked out upon your body, and any hits outside the line shall not count."

There are some things in this world for which not even the most profound rural philosopher can account to his own satisfaction.

"I never saw an animal move so slowly before in all my life!" cried an exasperated traveller in an Essex carrier's cart, behind which the clouds of a rapidly rising storm were growing blacker every moment. "Can't the horse go any faster? You had an excellent one fifteen years ago when I used to spend the summer here."

"That's the curious thing about it," said the driver, gazing first at his steed and then at the uneasy passenger in a mildly speculative way. "This horse is the very same identical horse that I drove that summer. I don't know what on earth's the matter with him! He seems to have lost his animation."

A man had been invited unexpectedly to make an automobile trip, and was not fully prepared for it. The roads were very dusty, and after travelling several miles, the party came to a village, where the man thought he might be able to purchase something to protect his clothing.

The automobile halted before the general store of the village. The man alighted and accosted the single clerk.

"I want to get a linen duster," he said.

"I am sorry," returned the clerk, easily, "we are just out of linen dusters. But I can let you have a nice feather duster."

BAYNES BUGGIES

No. 530

New York Road Wagon

BAYNES

The Baynes Carriage Co., Ltd.

Hamilton, Ont.

The Road Wagon par excellence, and at a very moderate price.

The stick seat is a beautiful design, and where parties want a light-looking, yet substantial runabout, that will stand hard knocks, this is a good job to buy.

Fitted with our Long-distance Axles and Quick-shifting Couplers.

If your dealer doesn't handle our goods, write us direct.

Why buy another farm?

Are you thinking of buying another farm in order to extend your operations and produce larger crops?

You will find it better in almost every way to build a new farm on top of the one you now have.

Do not seek to farm more acres but make your land produce more bushels.

If the farm you now have produces—say 35 bushels of oats per acre, instead of buying more land to get an additional 35-bushel yield, why not make the farm you have produce 70 bushels per acre? You can do it.

Buy an I.H.C. Manure Spreader

It is the machine which enables you to take the manure produced on the farm and in a few years fully double the productive power of your land.

It does this by placing the manure on the soil in the most available condition to support plant life.

It also makes the manure go further than can be done in any other way.

I. H. C. manure spreaders are made in two styles: Corn King and Cloverleaf.

The Corn King is of the return apron type. The steel roller equipment of the apron on this machine reduces friction to the minimum, even with the heaviest loads. This machine will be supplied with either a ratchet feed or a double pawl worm feed for the apron. Either of these feeds can be regulated to bring the desired amount of manure to the beater. The beater is equipped with long, square steel teeth with chisel points. It is driven by means of a chain from a large sprocket on the rear axle. A vibrating rake is used on this machine to level the load as it comes to the beater. The Corn King spreader has steel wheels of the most serviceable construction and a frame made of thor-

oughly air-dried wood stock and put together in a very durable manner. There are three sizes of this machine: No. 2 small, No. 3 medium and No. 4 large.

The Cloverleaf is of the endless apron type. It is also supplied with two feeds for the apron—ratchet or double pawl worm feed. The beater on this machine is constructed the same as the beater on the Corn King. This spreader also has a vibrating rake to level the load as it comes to the beater, has steel wheels and a well made main frame. This spreader is made in three sizes: No. 2 small, No. 3 medium and No. 4 large. It is very attractive, being well painted and symmetrically designed.

Many Excellent Features

It is impossible to describe all of the features of the above machines in this small space. However, we have catalogs which illustrate and describe in detail the many excellent features of these machines. These catalogs are well worth procuring, not only because they describe the spreaders, but because they contain information on soil fertility.

Points that are well to bear in mind in connection with these spreaders are that you can top-dress your fields and grow large crops of clover to turn under and enrich the soil, so that you may grow still larger crops and add to the soil's fertility. They double the value of the manure, save much time and labor and greatly increase the value of your land by increasing the soil's fertility.

Any one of these machines will pay for itself in from one to two years, depending upon the amount of work you have for it to do.

Call on the International local agent and see about owning one of these manure spreaders. He will supply you with catalog and full information, or write direct to nearest branch house.
