CHIGNECTO POST AND BORDERER.

SACKVILLE, N. B., MAY 31, 1883.

—The Kentucky Democratic Convention demands the abolition of subsidies of every description, and the adoption of a tariff for revenue purposes only.

—The *Pull Mail Gazette* states that the Governor-Generalship of Canada in succession to the Marquis of Lorne, has been offered to the Marquis of Lansdowne, who has accepted, and will probably sail for Canada next October.

—Chicago has 5,000 bars, or one to every 120 inhabitants, while there are not much more than twice that number of stores for the supply of food. Fifteen blocks, covering three-tenths of a square mile, contain 225 groggeries.

—Senator Fair's wife, in just one hour's time, got a divorce, \$4,250, 000, and the magnificent family residence in San Francisco, and the custody of her three minor children, the bodiless young man of 20 was awarded to the father.

—At various points along the Union Pacific Railroad, the question of water on the alkali plains has been solved by artesian wells. Some of them, in the most promising places, give out abundant supplies of clear and wholesome water from a mountain spring. The depth of the wells varies from 250 to 900 feet.

—The *Paris Bourse* estimates the total stock of gold in the world in use as coin or as banking reserve in one shape or other at about \$580,000,000, of which total France has \$126,000,000, England \$136,000,000, Germany \$92,000,000, and the United States \$92,000,000. Other nations come in for shares varying from \$200,000 in the case of Holland to \$30,400,000 in Spain's.

—The American people are the champion pie-eaters of the planet, and it is therefore entirely proper that they should be blessed with the largest pie-making establishment in the world. This establishment is in the city of New York, and at present is making 100,000 pies a week, consuming every day 4 hogheads of sugar, 1,000 quarts of milk, 8 barrels of eggs (75 dozen to the barrel), 2,000 pounds of lard, 25 barrels of flour, and about \$420 worth of apples. The day before last Christmas 10 tons of mince-meat were made up into pies.

—About six years ago an old party in Wisconsin named Jenkins lost his wife. After various unsuccessful efforts to replace his deceased partner, he made a bargain with one Timothy Lewis to give him \$3,000 if he would provide a suitable female willing to be made Mrs. Jenkins. Such a person Lewis found in a widowed sister-in-law. The marriage took place, but Jenkins refused to pay the stipulated sum. Two years afterwards Jenkins died and Lewis then filed a claim for \$3,000 against the estate. After passing from court to court the executors recently effected a compromise by paying \$1,400.

—In the Nineteenth Century for April, Sir John Lubbock, the distinguished banker, scientist, and member of Parliament, has an article entitled *Our National Balance-Sheet*, containing many interesting facts and figures relating to the governmental expenditures of Great Britain and the sources from which those expenditures are defrayed. It is not very pleasant to think that out of an expenditure of nearly \$72,000,000, \$49,000,000, or nearly five-eighths, are devoted to paying the interest on the national debt and supporting the army and navy, and the unpleasantness is not lessened when we note that but one thirtieth of this amount, or \$23,800,000, is devoted to so important a matter as elementary education. The expenses of the Government itself and of the administration of justice amount in all to about \$9,800,000, a sum the size of which is largely explained by the smallness of the educational grant. When we consider the sources of the revenue we find that \$29,000,000 are raised by duties, both customs and excises, on wine, spirits, beer, tobacco, and, while it is melancholy to think that so immense a sum can be thus raised by an eminently Christian nation, there is yet something consolatory in the reflection that such a tax should defray the cost of the army and navy and pay nearly half the interest of the national debt. It is well that an expense which is the product of human folly and criminality in the present and the past should be met by taxing similar human frailties. From duties on wills and legacies, and stamps on deeds, receipts, patents, &c., are obtained \$12,260,000, and from the income tax and the land and house tax \$19,730,000. On an average, every man, woman, and child in the United Kingdom and Ireland contribute to the expenditure of the country somewhat less than one shilling a week. The national debt is \$731,000,000 as against \$200,000,000 in 1815.

VOL. 14.-NO. 4.

Lord Lansdowne.
The Coming Governor-General of Canada.—A Sketch of His Ancestry.—His Wealth and Personal Appearance.

The announcement that the Marquis of Lansdowne has been appointed the successor of the present Governor-General has directed public attention to him, and our readers will expect some account of our NEXT VICEROY.

The Earls of Kerry trace their origin to a common ancestor in the direct line with the houses of Fitzgerald, Windsor, Carver, Grace, &c., namely, Walter Fitz Otho Castellan, of Windsor, in the eleventh century. His second son, William, was sent by Earl Strongbow in 1171 to Ireland to assist in the reduction of that island. William, the eldest son, remained in Ireland, and his son became first lord of Kerry, and founded the Grey Franciscan friars of Ardelt in 1258. As time went on the family proved itself an active family, one of the heads attending by a writ of summons of Edward I. in 1297, with horse and arms on his expedition into Scotland. Another, years after, served for a long period under the Emperors of Germany, but returned to the old soil, like his ancestors, as soon as his work abroad was done. They married well, did these Lords of Kerry, and one of them married a daughter of Sir William Petty. Another of the prospective Governor-General's ancestors was William, Earl of Shelburne.

A DISTINGUISHED STATESMAN in the reign of George III. In 1782 this ancestor, after the decease of the Marquess of Rockingham, was appointed Prime Minister, and in 1784 was advanced into the dignities of Earl of Lansdowne and Marquis of Lansdowne. The third Marquess of Lansdowne was famous as a statesman. In 1804, as Lord Henry Petty, he made his maiden speech upon the affairs of Ireland. Though at that time but little more than 24 years old, his speech was remarkable for the soundness and clearness of his views on the general economic bearings of the currency question, and thus he showed himself no unworthy descendant of the great Sir Wm. Petty, the father of the science of political economy in Great Britain. But notwithstanding that the third Marquess of Lansdowne was a leader in the great questions of the abolition of slavery, the repeal of the penal law, Catholic emancipation, and Irish affairs generally, and came to be in time regarded as the Nestor of the House of Lords, perhaps by many, one of his greatest claims to regard will be the fact he was the means of introducing Macaulay, the historian, to the Commons of England.

THE PRESENT MARQUIS OF LANSDOWNE, fifth marquis, succeeded his father in 1866. He was born on the 14th January, 1845, and was educated at Eton and at Oxford. A young man of great family, with good looks and princely fortune, and a position ready-made for him, his England early temptation to remain a purely idle man, and it is much to the credit of Lord Lansdowne that at an early period in his life he took a serious view of the responsibilities imposed upon him by the power he had to justify his possession by performing some duties in the State. He succeeded his father when yet but 21. Received into the Government in 1868, he showed by his application to business that he did not propose to appropriate the name alone of his office. The Lansdownes have long been one of the few great Whig families which are as pillars to the Liberal party, and the present Marquess has always taken a great interest in Canada, and in 1881 Sir John Macdonald, with Sir A. T. Galt, attended a conference of noblemen and gentry at Lansdowne house, to discuss plans relating to immigration to this Dominion. In personal appearance he is described as rather tall, slight of figure, and good looking.

Josh Billings Heard from.
NEWPORT, R. I., Aug. 11, 1880.
Dear "Bitters"—I am here trying to breathe in all the salt air of the ocean, and having been a sufferer for more than a year with a refractory liver, I was induced to mix Hop Bitters with the sea air, and have found the cure a glorious result. I have been greatly helped by the Bitters and am not at all afraid to say so.

First Rate Evidence.
"Often unable to attend business, being subject to serious disorder of the kidneys. After a long series of sickness, tried Burdock Blood Bitters and was relieved by two bottles." Mr. B. Turner, of Rochester, N. Y., takes the pains to write.

Has been using Burdock Blood Bitters as a liver remedy, and finds them very efficacious. Chas. L. Ainsworth, 41 Vance Block, Indianapolis, Ind.

Farm and Household.

The farms and stock which are required to furnish the milk supply for New York, Brooklyn and Jersey City are worth, at a moderate calculation, \$15,000,000.

Cleanliness is a virtue not appreciated. Bats often the whole body. It conduces to health, comfort, and happiness, and whoever neglects it is not only careless, but in a sense he is wicked, neglecting his bodily health and trifling with life.

When the voice is lost, as is sometimes the case, from the effects of a cold, a simple, pleasant remedy is furnished by beating up the white of an egg, adding to it the juice of one lemon, and sweetening with white sugar to the taste. Take a teaspoonful from time to time.

Ignorant people often think to break up a cold by the free use of spirits. It is a dangerous experiment, for if there is any degree of inflammation, which is most general by the case, strong liquor, in place of removing, will be sure to increase the trouble, and is very liable to induce inflammatory fever.

The following is the visible supply of grain in the United States and Canada:

May 15, 1883. May 15, 1882.
Wheat, bush. 10,291,813 10,293,831
Corn, bush. 15,447,398 8,551,281
Oats, bush. 4,309,194 1,876,675
Barley, bush. 890,045 254,406
Rye, bush. 1,844,390 1,065,016

Reports from London say, it is now certain that the wheat crop will not be an average yield. The crop reports received from Chicago covering the entire north-west and south-west say, winter wheat shows no improvement, and the present season promises to be a repetition of 1882.

A sure and simple cure for group is as follows:—Rub a lump of alum in the white of an egg till the albumen coagulates. Give a part of a teaspoonful every ten or fifteen minutes, according to the age of the child, and violence of attack, till patient is relieved. An excessive dose will only produce vomiting, which will do the child no harm.

The following is an excellent and agreeable cough syrup: One half pound figs; three lemons; one gill water. Grate the lemon peel (the yellow part); chop the rest and the figs together; add sugar. Mix all through in a bottle, and it is ready for use.

The cattle shipping season has opened at Montreal with unusual activity. The already capacious yards were not sufficient to accommodate the large number of cattle seeking accommodation and new sheds had to be erected. The English market is steady. Liverpool cattle, live weight, 73d. per lb.; London, 73d., and in Glasgow, 8d. Sheep steady at 94d. per lb. Ocean freights are steady at 23 10s. and 24s. per head for cattle.

Dr. Dyce Buckworth, an English physician, contributes a short memorandum on the subject of curing toothache. He was called on to treat a case of very severe toothache, and tried various ordinary remedies, including chloroform and carbolic acid, without any benefit to the patient. He then remembered having read that the pain might be relieved by holding in the mouth a solution of bicarbonate of soda. He gave the patient half a drachm in an ounce of water, and to his astonishment, the pain ceased immediately, and complete relief was secured. He thinks that, as the remedy is so simple and the disease so distressing and often intractable, this treatment may be worthy of notice and imitation.

A firm at Victoria, British Columbia, is constructing an extensive floating cannery and fish-oil refinery. It will be about one hundred and forty feet long, and will have a depth of eight feet. Powerful machinery to propel and capacious tanks and retorts for use in refining the oil and cooking the fish are already built. The vessel will be launched and ready for action by April, and will make her first foray among the colicahs on the northwest coast.

KANOKA, Mo., Feb. 9, 1880.
I purchased five bottles of your Hop Bitters from Bishop & Co. last fall, for my daughter, and am well pleased with the Bitters. They did her more good than all the medicine she has taken for six years.

WM. T. McCLURE.
The above is from a very reliable farmer, whose habits are in poor health for seven or eight years, and could obtain no relief until he used Hop Bitters. She is now in good health, and has a very good crop of wheat. We have a large sale, and they are making remarkable cures.

W. H. BISHOP & CO.
Take Your Choice.
You can be weak, nervous, debilitated, and dependent, disqualified for work of head or hand, or you can have a share of health and peace of mind. Burdock Blood Bitters will alleviate your misery and do you a world of good if you will persevere in their use for a few weeks.

Conditions of Health-Giving Exercise.

The summer air of the highlands makes outdoor life a luxury, but the chief advantage of the plan is this: The stimulus of a pleasant pastime enables a man to beguile himself into about ten times as much exercise as he could stand in the Turner-hall. The visitors of a hygienic gymnasium take their turn at the horizontal bar as they would swallow the drugs of a public dispensary; they know that it is a lesser evil, they know that the road to Styx is the alternative, they intend to come every day, but the intolerable tedium of the crank-work exercise soon shows the shallow resolution of the devotee for exertion is too abstract; it lacks the charm of progressiveness and the stimulus of a proximate, tangible, and visible purpose. The sham competition of a regiment of invalids under the command of a surgeon, who will not sweeten the bitter broth; it is still crank-work, minus the club of the jailer, and nine out of ten hygienic gymnasts will soon find or make a pretext for discontinuing their visits. How many out of a hundred pupils of a young ladies' seminary would dream of performing their "calisthenics" at home? They would as soon walk on all-fours, or ride on a dry clothes-line. But arrange a May-day picnic in the mountains, and they will not be a lid in climbing up the steepest rocks, and swing on wild grape-vines for hours together.

It is likewise certain that fatigues can be far better borne if the body is not encumbered with a surplus of caloric clothes. A pair of linen trousers, a flannel hunting shirt, and a loose necktie, make the most hygienic summer dress. In the afternoon remove the necktie and roll up the shirt-sleeves; it can do no harm to inhale the cool air of all available means, and let the cutaneous lungs share in the luxury. Nor is there any excuse for the wide-spread fallacy that it is dangerous, even in the most sweltering nights, to remove the bed-blankets. Kicks and colds are the consequence of this. If you become too warm, and sleep in your shirt and drawers, or under a linen bed-sheet. Half-sack lizards sleep the year round on the stone terrace of the Museo Borbonico, and the same holds true of the human body. The body effects part of its breathing through the pores. Paint the pores with yellow ochre and copal-varnish would kill him as surely as hanging him by the neck. Let the skin of the body and a stratum of heavy blankets gradually surcharged with carbonic acid—in warm weather even to the verge of the saturation-point. The perspiration is thus forced back upon the lungs, and the lungs are perhaps already weakened by age—have to do double work.

From "The Remedies of Nature," by Dr. Felix L. Oswald, in *Popular Science Monthly* for June.

RACKED BY INNUMERABLE PAINS, restless by day, sleepless at night, rising unrefreshed in the morning, and prostrated by the evening, the dyspeptic takes indeed a gloomy view of human existence. Prepared for the worst, he is heart-broken, oppressed at the pain of the stomach, and the attendant annoyances of constipation and indigestion combine to render him utterly wretched. But there is, if he will take advantage of it, a reliable source of relief from all this misery. NORTHOPE & LYMAN'S VEGETABLE DISCOVERY and DYSPEPTIC CURE is, as its name imports, a botanical preparation, free from mineral poison, and an all-sufficient remedy for the indigestion in its most obstinate form. It is a powerful agent in the blood, purifies the urinary secretion, and promotes a flow of healthy bile into the natural channels, besides expelling it from the circulation. Experience has proved that this medicine is a thorough remedy for dyspepsia, acridities, erysipelas, salt rheum, lumbago and all impurities of the blood. Price, \$1.00. Sample Bottle, 10 cents. Ask for NORTHOPE & LYMAN'S Vegetable Discovery and Dyspeptic Cure. The wrapper bears a fac-simile of their signature. Sold by all medicine dealers.

COQUETRY WITH CONSUMPTION.—Some people, troubled with coughs seem absolutely to coquet with consumption, encouraging it by a total neglect of medicine, and again attempting to stave off with ill-chosen cough remedies. How much wiser to eradicate it at the outset by using Northope & Lyman's Discovery of God-Liver Oil and Phosphoprophites of Lime and Soda. Promptitude in the use of this medicine cannot be strongly urged upon these consumptively inclined, in a climate so severe during the winter as our own. The public generally as well as the medical fraternity, is acquainted with the value, as a remedy for lung and throat troubles, of the purified oil of the Cod's liver, and it is in this standard Emulsion are the finest tonics in existence, namely, lime and soda, hypophosphites, which the chemist compounds as a remedy. Sold by all druggists, at 50 cents and \$1.00 per bottle. Prepared only by NORTHOPE & LYMAN, Toronto, Canada.

My Mother
Has been using Burdock Blood Bitters as a liver remedy, and finds them very efficacious. Chas. L. Ainsworth, 41 Vance Block, Indianapolis, Ind.

Herschel's Theory of the Conversion of Nebulae into Stars.

The whole range of astronomy presents no speculations which have attracted more attention than the celebrated nebular hypotheses of Herschel and Laplace. We shall first enunciate these speculations, and then we shall attempt to indicate how far they seem to be warranted by the actual state of scientific knowledge. In one of his most memorable papers, Sir William Herschel presents us with a summary of his observations on the nebulae, arranged in such a manner as to suggest his theory of the gradual transmutation of nebulae into stars. He first shows us that there are regions in the heavens where a faint diffused nebulae is all that can be detected by the telescope. There are other nebulae in which a nucleus can be just discerned; others again in which the nucleus is easily seen; and still others where the nucleus is a brilliant, star-like object. The transition from an object of this kind to a nebulous star is very natural, while the nebulous stars pass into the ordinary stars by a few gradual stages. It is thus possible to enumerate a series of objects, beginning at one end with the most diffused nebulae, and ending at the other with an ordinary fixed star or group of stars. Each object in the series differs but slightly from the object just before it and just after it. It seemed to Herschel that he was thus able to view the actual changes by which masses of phosphenescent or glowing gas or smoke actually condensed down into stars.—ROBERT S. BALL, in *Popular Science Monthly* for June.

One of the most successful and benign combinations ever effected is that of the six medicinal oils of which *TRIMMER'S EUCALYPTI OIL* is composed. This medicine is the highest order, but, inasmuch as it contains no alcohol, its influence is not weakened by evaporation. It is the case with a great many oils of doubtful efficacy, which have an alcoholic basis. It is an incomparable specific for the affections of the throat and lungs, remedies chronic hoarseness and feebleness of the voice, and is a superb remedy for that harassing and consuming disease, bronchitis, and catarrh. Swelling of the neck, tumor, neuritis, larynx, tracheitis, and pneumonia, and other diseases which can be effected by outward treatment, yield to the operation with greater promptitude and certainty than to that of any other remedy, and when used inwardly, it is equally efficacious. Dysentery, kidney troubles, piles, excoriated nipples are among the complaints which it eradicates. For ulcers, sores, burns, and contusions, it is used with unmeasured success. It is used by NORTHOPE & LYMAN, Toronto, Ont.

From Mr. John Houston, Lower Woodstock:—A Remarkable Case of Cure. For two years I was just my foot to the ground. After having tried in vain every remedy obtainable, two bottles of W. T. Turner's Cure-all instantly cured me.
