

In speaking of profits in dairving writer in Practical Farmer says: A fairly good dairy cow will pro duce 5,000 pounds of milk per year. which, sold at 3 cents per pound, the prevailing price, makes \$150 per year. From a given ration she will consum -and we will charge the cow for full ration for 365 days-two and a third tons of cowpea hay, valued at \$28: five tons of ensilage, valued at \$10; - two tons corn stover, valued at \$10, and one-third ton cottonseed meal, valued at \$8, a grand total of \$56 for cost of food for one cow that produces \$150 vorth of milk. Besides this you have cowpea hay, which you have sold for \$12 per ton, corn ensilage at \$2 and corn stover at \$5 a ton in form of milk. And then the manure! All of it but \$5.60 returned to your soil. If dairying does not pay now, it is because the machines are worthless-that is, the cow which takes the raw material (as corn stover, cowpea hay, etc.) to make into finished products, as milk and butter, is worthless. Use a good bull. then, to breed up the dairy stock, and as soon as this is done dairy stock will improve and dairying will become the most profitable industry in the middle south-more profitable than cotton growing or cotton manufacturing.

Dairy Products. The complete census statistics of dairy matters announced today show tha of the 5,739,657 farms in the country 4.514,210 report dairy product and that in 1899 the total dairy product had a valuation of \$472,369,255. The number of dairy cows was 17,139,674. The receipts from dairy products sold aggregated \$281,629,958, and products consumed on the farm' were valued at \$190,739,297. There were produced from the dairy cows reported a total of 7,266,392,674 gallons of milk, an average of 424 gallons per cow. The farmers also report the

662 gallons of cream, for \$8,838,776. The farms reporting butter manufac-518,139,026 pounds were soid, for which the farmers received \$86,606,446. Farms reporting cheese manufactured pounds were sold for \$1,342,444. New dairy cows, 1,501,608, the largest value of dairy products, \$55,474,155. Pennsylvania comes second.

Business Co-operation.

The dairy industry of Denmark af fords a wonderful example of the ben efits of business co-operation, says National Stockman and Farmer. Co-operative dairies have been in operation there for twenty years and in that time have grown to over a thousand. The average number of shareholders is 146 and of cows 832. This shows that small dairies are the rule, the average less than six cows to the dairy. Some idea of the economic advantages may be had by considering that instead of 146 churnings there is but one; that instead of 146 varieties of butter there is but one-and it is good-and that the producer benefits by both the saving of labor and the quality of the product.

Helpful Dairy Jottings. If you feed turnips to cows giving milk, feed immediately after milking. Keep all mangers clean of rejected food

There is no patented process for raising fine stock. Milk subjected to the odors of the

kitchen will never make premium but-The stable should be whitewashed at

least once or twice a year; also the milkhouse and can rack, which can be done neatly and quickly with a spray pump.

Judging Butter,

There are very few butter makers who do not know the difference between good and poor butter, and the apparent difference between their judg- try. ment and that of the butter judge is often due to the difference in the time of scoring. If he has kept samples of each day's make and is careful at the one of the best and strongest fertilizers weigh can, he will gradually improve his butter for the trade. He would remember the flavors in each day's milk which is not too favorable for the and notice bow they affect the keeping | keeping of this manure, as it parts quality of his butter, thus following | very rapidly with its ammonia, it is from cause to effect.
