PANOPEPTON

In Refractory Cases.

TO use Panopepton in a case that has been proving refractory to both treatment and management is often to bring about an immediate change for the better in all the conditions—especially where there has been difficulty in getting nourishment adapted to the taste and toleration of the patient.

Panopepton is well designed to meet the essential desiderata of a food for the sick—in agreeability, assimilability, and substantial peculiar nutritive value. It presents, in a form ready for absorption, the entire nutritious substance of beef and wheat—is a complete solution of all the nutrient, savory and stimulant nitrogenous and inorganic constituents of these typical foods.

Panopepton is carefully standardised. The analysis gives 22% of soluble solids, with a “nutritive balance” of one of proteids to two of carbohydrates. There is absolutely no cane sugar in Panopepton, nor any chemical preservative.

Panopepton may be used alone, gradually supplemented with other suitable foods, until finally ordinary forms of nourishment are again available. When digestion is much impaired, it is sometimes given to advantage combined with Fairchild's Essence of Pepsine—equal parts.
