SITES FOR HARBOR IMPROVEMENTS.

The Opinions of the City Engineer and Harbor Master.

The Board of Public Works met yesterday afternoon and received the reports of the city engineer and harbor master of their opinions on the best site for harbor improvements in Carleton.

The city engineer Mr. Hurd Peters, in his report gave some suggestions and raised some objections in regard to the proposed plan of extending South Rodney wharf. He believed that the space between Protection street and Sand Point slip offers more advantages than any other. His report stated that on the 320 feet of harbor frontage there comprised and with very little preparatory dredging a deep water wharf can be built and connected with the existing lines of railway at very much less than the proposed plan, (that of extending South Rodney wharf.) This wharf could be ready for use and for yielding revenue in one season while two seasons would be required for the South Rodney wharf extension.

It is true this would give only one berth, but as the C. P. R. wharf so near at hand gives another, there would be two berths at the railway terminus. It would also be practicable in all probability to arrange with the C. P. R. to connect the two wharves and thus give a continuous frontage of nearly 800 feet. Should further wharf frontage be deemed expedient it can be obtained by building westwardly on the line of the slip when and as required. The surface area between Protection street and the slip would give ample room for the erection of warehouses, workshops, sheds etc., suited for various cargoes and approached by railway tracks on all sides.

The harbor master's report expressed the opinion that the South Rodney wharf extended to the harbor line and then running south to Protection slip would be the best plan of improvement.

The board will meet again soon to consider the harbor improvement matter and prepare a report to be submitted to the council.
