**TULEY'S  
OBSTETRICAL NURSING.**

A TEXT-BOOK OF OBSTETRICAL NURSING. By Henry E. Tuley, A. M., M. D., Louisville, Ky., Professor of Obstetrics, Medical Department of Kentucky University, Secretary of the Mississippi Valley Medical Association.

This book, while written primarily as a text-book for nurses, will be found of great value to practicing physicians. It abounds in practical hints and suggestions, gives the details so essential for the successful care of the parturient woman and which physicians too often neglect to their own detriment as well as that of the patient.

Country practitioners, who have to depend upon untrained nurses, can hardly afford to be without this book, which will enable them to give the necessary instruction to their assistants. It describes the anatomy, physiology and hygiene of the genital tract and gives directions for the care of the expectant mother during pregnancy and confinement, and of mother and child during the period of lactation. The author's experience as obstetrician, teacher and writer admirably fits him for the preparation of such a work. It is the most profusely illustrated work on obstetrical nursing yet issued.

**Cloth, Gilt Top, \$1.00.**
