CALVES Raise Them Without Milk. Booklet free. The Steel, Briggs Seed Co., Toronto, Ont.

When Writing Mention This Paper.

QUESTIONS AND ANSWERS. Miscellaneous.

GOOSE WHEAT—DOCKING A TWO-YEAR-OLD.

1. Is goose wheat as good an egg-producer as fall wheat?

2. What place do you give it as a beef-producer?

3. Would you advise docking a colt coming two years? Is there any danger of bleeding too much? N. M. K.

Ans.—1. We have never fed goose wheat to poultry, but see no reason why it should not be satisfactory. It is very hard, but the gizzard of a chicken should be able to reduce it, and it is rich in nutrients.

2. First-class, if ground fine and mixed with other meals.

3. As well now as any time. There is no danger of excessive bleeding, if cauterized with a hot iron, which is the common practice, a cord being tied around the tail above the dock, till danger of bleeding is past.

SILLO FOR FIFTEEN CATTLE.

1. I intend building a silo this coming spring, and would like to know about the size to build for keeping fifteen mature cattle over winter.

2. Do you advise building a silo large enough so as to have about one-third of silage left over for summer feeding?

3. How many acres of hill corn (3 ft. 6 in. by 3 ft. 6 in.) should I plant to fill the size silo I would need, and what is the best variety of corn to grow? F. J. S.

Ans.—For a feeding period of 200 days, allowing the fairly liberal quantity of 40 pounds per head per day, you would want a silo with a capacity of 60 tons. This would be provided easily by a silo twelve feet in diameter and thirty feet high, allowing considerable space for settling. Such a silo might be made to hold 70 or 75 tons, by refilling.

2. Where only about fifteen head of stock are kept, we would recommend building the one silo large enough to ensure some silage being left over for summer feeding. When a larger stock is kept, we would prefer having two silos, since the surface may then be lowered faster, day by day, with some slight advantage in the quality of the silage as fed. In your case, we would advise the size mentioned above.

3. A good crop of Early Leaning should yield fifteen tons per acre in your locality. Five acres should fill your silo once, though it would be wise to plant six or eight, as a surplus may be fed dry, either husked or with the ears on.

PECULIAR TASTE IN MILK—CREAM DIFFICULT TO CHURN.

We have two Shorthorn grade cows, five and eight years old. One calved in May, 1909, the other in June, 1909, and were bred again in August and September. They are in thin condition, but strong and hearty. They are fed on silage and cut out straw and pulped turnips, mixed about two days ahead of feeding, and about three quarts of meal (oats 2 parts, peas 1, barley 1), twice a day, and drink from a good spring creek. Are stabled in a new, warm, well-ventilated stable.

The milk has a peculiar taste, and also the butter, cream being very hard to churn.

What do you think is the trouble? If necessary, where could I send sample of milk to be tested? F. H.

Ans.—The best way would be to give each of these cows about 1½ pounds of Epsom salts in the form of a drench, and then pasteurize the milk, which would overcome the peculiar taste, and make the cream more easily churned. If the milk is to be used for direct consumption, pasteurize before using, but for that part which is to be churned, it would be sufficient to pasteurize the cream. Heat it to a temperature of 160 degrees, allow to stand for ten minutes, then cool to 70 degrees, add about 1 pint of good-flavored sour cream milk or buttermilk, and allow to stand in a warm place until it thickens, when, no doubt, it will churn at the usual temperature.

H. H. DEAN.

"Peerless" The fence that stands up against every strain

Our heavy all No. 9 PEERLESS Fence, made from hard steel, English Wire, has double the strength ever required in a wire fence. The galvanizing, by the "acid test," stands twice as much as that on ordinary fence wire. This means many years longer life—greater value. Do you want the best?

the fence that saves expense

because it needs no repairs and lasts a lifetime. It is rust that destroys wire fences. English Wire Manufacturers know how to prevent this. To this English Wire add the PEERLESS method of construction and the PEERLESS lock and you have a fence without a rival. We are manufacturers of high grade farm, poultry, ornamental fencing and gates. Write for book.

THE BANWELL NOXIE WIRE FENCE CO., LTD.
DEPT. 15 HAMILTON, ONT., WINDERMERE, MAN.
