

PRODUCTION OF CHEESE.—In 1853, 1,000,000 lbs. of cheese were exported from here to England, and in 1870, 7,000,000 lbs. The State of New York alone has now nearly 1,000 cheese manufactories, which use the milk of more than 250,000 cows, making therefrom 80,000,000 lbs. of cheese, which is 1,000 lbs. of cheese for every three cows. The cheese production of the United States is now over 100,000,000 lbs., of which 60,000,000 lbs. are exported. England exports scarcely 3,000,000 pounds, while little Holland, which used to be the principal cheese-producing country in the world, exports at present 25,000,000 lbs. This latter fact suggests the extent which the cheese production of the United States may reach in the course of years, and the wealth which its exportation will bring back—as the Hollanders used to boast that their cheese production alone was more valuable and reliable than a gold mine, very few of which surpassed the Dutch cheese in the profits realized.—*Am.
