

THE CLIMAX IN MILLING

WE have recently discovered what is considered to be the true principle of reducing wheat for flouring purposes, and can be adapted to any roller mill without interfering with existing arrangements. Our Climax is a first reduction machine, having large capacity, and will produce by one operation more and better middlings than the ordinary rolls do with three or four. We claim for our machine better results than have been produced by any other device now on the market.

This principle does away with low grade flour. 75 per cent. of patent flour is made from pure middlings from hard Manitoba wheat; the balance is good baker's. From winter wheat, 50 per cent. of choice patent from middlings; the balance is good family.
