WHY THEY KILL RATTILERS

Colorado Way of Turning the Dangerous Trick.

...and the daring of the cowboy in cutting off the head of the rattler.

...you ever see a cowpuncher kill a rattlesnake with a knife?

...I have seen a plainsman ride up to a small steel rattler, jump off his horse and link at the waving head, avoid the strike and as the reptile came to place a heel upon its neck, simply take a knife from his belt and slash it.

...I have also seen a live rattler thrown up on a haystack machine, and I have seen the men working on that stack jump, roll, tumble and slide to get away.

...I have seen a young daredevil who would go out of his way to slip with a rattler.

...I have seen a man who would kill at least a dozen with a knife.

...I have seen a man who would kill a rattler and about 20 years old.

...I have seen a man who would kill a rattler and about 20 years old.

...I have seen a man who would kill a rattler and about 20 years old.

MANY SECRETS ARE LOST

Famous Processes That Were Known to the Ancients.

Things That Our Forefathers Were Able to Do That We Now Find Well Nigh Impossible.

Taking into consideration the marvelous strides we have made in almost every branch of knowledge during the last 200 or 300 years, it seems exceedingly strange that our forefathers should have been able to do things which we find impossible and that we cannot discover secrets which were almost common knowledge hundreds of years ago.

Sheffield turns out the finest, hardest and most perfect steel the world produces, but even Sheffield cannot produce a sword blade to compare with those the Saracens made and used hundreds of years ago.

Thousands of years ago, for instance, the Egyptians used to embalm the bodies of their dead kings and nobility so perfectly that the bodies are in wonderful preservation today.

There are a dozen different methods of making artificial diamonds, but none of the stones produced by these methods can compare with those made of old French paste, the secret of which is lost.

Probably not one out of every ten thousand buildings standing in all parts of the world, and built by modern masons, will still be standing 500 years hence.

The interment will take place on Saturday afternoon at 2 o'clock and a special train will leave the Union station at 1 p. m., to accommodate the Toronto people.

The interment will be in Christ's Church cemetery, Woodbridge, and the Rev. William Walsh of Brampton, the grand chaplain of British America, assisted by Rev. H. C. Dixon, grand chaplain for Ontario West, will probably conduct the burial services.

The grand officers, the county officers and the district officers, will be in their official robes, and the other members will wear the badge. Wreaths

The secret of glass blowing and tinting is not yet entirely lost. There are still a few men who can produce glass work equal to the things of this kind which the ancients turned out hundreds of years ago.

THE LATE MR. WALLACE

His Death Mourned All Over Canada.

Toronto, Oct. 10.—The executive of the grand lodge of Orangemen in Ontario West held a special meeting yesterday in Victoria, B. C., to consider what arrangements should be made for the funeral of the late Hon. N. Clarke Wallace, grand sovereign of the Orange Order in British North America.

The interment will take place on Saturday afternoon at 2 o'clock and a special train will leave the Union station at 1 p. m., to accommodate the Toronto people.

The interment will be in Christ's Church cemetery, Woodbridge, and the Rev. William Walsh of Brampton, the grand chaplain of British America, assisted by Rev. H. C. Dixon, grand chaplain for Ontario West, will probably conduct the burial services.

The grand officers, the county officers and the district officers, will be in their official robes, and the other members will wear the badge. Wreaths

PACKING BUSINESS

Increases 25 Per Cent. During the Past Year.

Seattle, Oct. 22.—Seattle's packing house business is 25 per cent greater than a year ago.

There are now slaughtered in Seattle from 2500 to 2800 cattle, 8000 sheep and from 5000 to 6000 hogs each month.

Seattle consumes a large proportion of the beef cattle sold from the ranches of Oregon, Washington and Idaho, besides many thousands annually from Montana.

A large share of the hogs raised in the state are slaughtered here, and Oregon and Idaho are also largely drawn upon.

Seattle is the great packing house center of the state. Two of the largest abattoirs in the Pacific Northwest are located here and thousands of cattle, sheep and hogs are killed here annually by smaller local concerns.

Seattle packing house products are to be found on sale throughout this state and Alaska, as well as in adjoining states.

Although the export trade to foreign countries is still of insignificant proportions, Seattle packing house products go to every part of the world.

The value of the packing house products in Seattle in 1900 was more than \$2,000,000.

The value of the packing house products in Seattle in 1900 was more than \$2,000,000.

THE EVOLUTION OF WARSHIPS

A man need not be a scholar to be an inventor.

One of the most successful aeronauts of old times who had made a study of aerial currents and the managements of balloons once delivered an address in which he referred to "the anaconda" as "the largest bird that ever flew."

He also remarked that "the mental faculties of a man's mind is so constructed as to bring things down to a pin's point."

He also referred to the currents of air as "steatichums, meaning strata, and yet he was one of the foremost balloonists of his time.

He was an inventor also of many useful things and was the first man in the country to suggest an ironclad man-of-war with slanting sides.

He built a miniature vessel on this plan of sheet iron, placing it in the water and fired musket balls at it at short range.

Every ball glanced off. The Merrimac was built on a similar plan and from that humble beginning the evolution or revolution in naval architecture took its start.

The energetic hen. There was once an energetic hen who paid strict attention to duty.

Each time that she laid an egg a rooster would crow lustily and excitedly, and announce the fact to the world.

Now, there was certain hens that belonged to the gossip brigade, and they were filled with envy because of this.

So they went to the energetic hen and said: "We think it just awful the way Mr. Rooster takes all the credit for your success."

By Using Long Distance Telephone You are put in immediate communication with Bonanza, Enderado, Hunker, Dominion, Gold Run or Sulphur Creeks.

Ladies The costume you are going to wear at St. Andrew's Ball should be something extra nice. We deal in fabrics that go to make up this class of garment. N. A. T. & T. CO.

FREIGHTING AROUND WHITEHORSE RAPIDS FROM MILES CANYON IN 1898.

Goetzman's Magnificent Souvenir OF THE Klondike IS NOW BEING CLOSED OUT AT .. \$2.50 EACH .. This Work Is Without Exception the Finest Production Ever Published Showing Views of This Country. The Work Is Handsomely Bound With an Illuminated Cover and Contains 80 PAGES OF ILLUSTRATIONS OVER 200 VIEWS. Former Price \$5.00, NOW \$2.50 Copies, While They Last, Can Be Obtained at All Book Stores or at Goetzman's Photograph Studio Corner First Avenue and Second Street

In modern buildings the cement and mortar are the weakest points. In buildings which the Romans and Greeks raised thousands of years ago the cement and mortar are the strongest points and hold good while the very stones they bind together crumble away with age. We cannot, with all our science, make such cement and mortar, and therefore we cannot build such buildings as the ancients raised. Chemistry, one might imagine, is the science which has, perhaps, made the greatest strides. Yet modern chemists cannot compound such dyes as were commonly used when the great nations of today were still unborn. Now and again it happens that searchers after antiquities come across fragments of fabrics which were dyed thousands of years ago, and they are astonished by the wonderful richness of the colors of the dyes, which, despite their age, are brighter and purer than anything we can produce. Modern artists buy their colors ready made and spend large sums on pigments with which to color their canvases. The pictures of modern artists will be colorless when many of the works of ancient masters are as bright as they are today. Just as the secret of dyeing has been lost, so has the secret of preserving the colors of artists' paintings. Yet the secret was known to every ancient artist, for they all mixed their own colors. How to make durable ink is another great secret we have lost. Look at any letter five or ten years old and you will probably notice that the writing has faded to a brown color and is very indistinct. Go to any big museum and you will find ancient MSS., the writing of which is as black and distinct as if the MSS. were written the day before yesterday. The secret of glass blowing and tinting is not yet entirely lost. There are still a few men who can produce glass work equal to the things of this kind which the ancients turned out hundreds of years ago. But the average glass manufacturer cannot produce anything that could at all compare with some of the commoner articles the Egyptians, and later, the founders of Venice, manufactured, and those who still hold the ancient secret guard it so closely that it will probably die with them and be added to the long list of things in which our ancestors beat us hollow. Try the new drink. Will make you a boy again. Only to be found at the Pioneer.
