the Summer. There is a new bathtub which will amuse the baby immensely in its work-ings. It is made of rubber, and, to give it shape, you blow it up with a bicycle pump, through a tiny valve. It stands on the floor, and holds water equal to the strongest wooden tub. They say that every tub must stand upon its own bottom. This tub can

Its great advantage is that, after baby has had its bath, the water can be emptied out, the valve unscrewed and the air released from the pneumatic interior. The tub can then be rolled or fold-d up and put upon the shelf until next bathing time. The rubber tub is considerably lighter than a wooden one, and can be taken away for the summer, when baby goes to the country. If need be, it can be used for a family foot tub in summer districts where personal conforts are scarce.
