SCRIBBLERS

No Icebergs in Winter.

THEY BREAK AWAY FROM THE ICE FIELDS IN THE SPRING.

The greatest dread in a sailor's life is fog, but in many waters even thick weather is run very close by the fear of icebergs, not only for their own danger but because they generally bring fog with them.

This year there is every indication that ice will be much more troublesome in the North Atlantic passenger route than it has been for a long time past. Contrary to general belief, the ice season in the Atlantic is not in the winter, but in the spring and summer, when the big bergs break away from the fields formed during the winter and drift down into the trade lanes.

Up to now the ice this year has been confined to drifts through which a big ship can push her way without very much difficulty, but against which several small steamers have been disabled through the blades of their propellors snapping off.

How the Damage is Done.

A well built model vessel can ram an iceberg end on and still come home to tell the tale. The great danger is when the ship does not hit the ice squarely but scrapes along its side. This happened in the case of the Titanic, when it was estimated that the hole made by the collison was never more than an inch or so wide, but so long that it sank what was the biggest ship then affoat.

So great is the ice danger that all the maritime nations subscribe to the up-keep of an ice patrol by the United States coastguard cutters which are now fitting out in the Atlantic ports, not only to warn all passing shipping of the presence of icebergs by wireless, but to destroy the bergs with gun-fire and dynamite charges.

Making Matters Worse

This work has to be done very carefully indeed, for there is always a great danger that the shock of the explosion will merely capsize the berg so that instead of a glistening white peak which can be seen for a long distance the only thing showing above the water is a dirty grey flat surface which cannot be observed until the ship is right into it. In clear weather icebergs can themselves be seen a very long way off and often give warning of their presence for miles by the "iceblink" or lightening on the horizon both by

day and night. Bergs Hidden in Fog

Unfortunately they are all too often surrounded by fog, in which case it is very difficult indeed to detect their presence. The old theory that bergs can be detected by the cooling of the air and water is now entirely explod-

. A ship's officer on the look-out for icehergs usually listens intently for an echo from his foghorn and for a sound of the sca breaking against the ice or of small pieces of ice rending away from the mass as it begins to melt. Another good sign is the presence of seals and certain birds at an unusual distance from dand, but all these indications are uncertain. Ice makes it difficult to break Atlantic speed records in the summer when the conditions appear most favorable, for as a matter of precaution all the passenger comnanies send their steamers very much farther south then than in the winter months in order to be clear of its presence.

RACING.

As I went chooing up the road, James Whiskers tried to pass; his flivver seemed to feel the goad when he stepped on the gas, and through its ancient joints there flowed all sorts of pep and sass. Wall Macou halldom," I cried

"I'll show this James some speed; the road is long, the road is wide, we'll have a race, indeed; just watch my good old tumbril slide like some gerfalcon freed." There was no reason for the burst of speed that started thus, but I was full of wienerwurst and proud of my old bus; in every race I would be first, I'd beat the other cuss. There was no reason why this James should try to pass my boat; to higher, nobler ends and aims his life he should devote, and he should shun all giddy games that rob man of his goat. We both were chumps. I see it now: James Whiskers sees it. too: I have a poultice on my brow, and he has one or two we did not see the vagrant cow till 'twas too late to slew. And so we struck her, fore and aft, while hitting fifty miles; and how the High Foolkiller laughed, how gaudy were his smiles! And now chirurgeons ply their graft with crosscut saws and files. "Now, by St. Bride," I say with sighs, 'that race will be my last: in days to come I'll be more wise Chan weep and moralize I'm in a plaster

When mixing cakes try adding boiling water to the eggs instead of milk. The eggs must be well beaten efore the water is added.
