

T. EATON CO., (LIMITED)

190 Yonge Street, July 29.

Strange!

Early closing has been persistently advertised by us for years, and yet some people are ignorant of the facts.

With newspapers as cheap as they are there's no excuse for not keeping posted. And when a store like this announces early closing

At 5 o'clock every day but Saturday, when we close at 1,

the news is just as important as the Holmes murder mystery or the political situation at Ottawa.

Won't you please remember now that we close at 5 o'clock instead of 6, as formerly? The change is made in the interests of salespeople, and if we can afford such consideration you can.

Better Than Ever

The shopping crowds are big, but we're determined to double them. The purchasing possibilities of the money are bigger now than ever before, but we're never satisfied. Values such as these clearly discount everything you can find anywhere else:

- CLOTHING**
- Men's Single and Double-breasted Cashmere Vests, saten back and front, detachable buttons, regular price \$2.50, special at \$1.50.
 - Men's Navy Blue Skeleton Coats, navy lined, fast blue, size 34-in. to 44-in., regular price \$2.50, special at \$1.00.
 - Boys' and Youties' striped Blouses, English Flannel, fast colors, size from 26-in. to 34-in. breast, regular price \$1.50, and \$2 special at \$1.00.
 - Men's Dark Canadian Tweed Pants, three shades in all sizes from 32-in. to 42-in. waist, special at \$1.25.
- GLOVES**
- Ladies' 7-button Kid Gloves, in tan, brown and dark colors, all sizes from 5-4 to 7-12, regular price 75c pair, special at 25c.
 - Ladies' 6-button Mousetraps Derby Gloves, in black, tan, navy blue and green, all sizes, balance of line sold out and samples, regular price \$1.50, special at 50c.
 - Gloves, in white and black silk, all sizes, regular price 25c pair, special at 10c.
- SHOES**
- Ladies' Imported Tan Goat Oxford Shoes, the newest designs, tan soles, razor toe, regular \$2.25, \$3 and \$2.50 special at \$2.00.
 - Ladies' Fine Douglas Kid One Strap Slippers, patent toe-cap, turn soles, very stylish, all sizes, 2-12 to 7, special at \$1.50.
 - Ladies' Kid Buttoned Boots, hand turn soles, patent tip, best American make, all sizes, 2-12 to 7, special at \$2.00.

That's enough to point the way. Equally good values all over the store. The trend of business here is towards larger usefulness, which means more money-saving than you're accustomed to. Every department is wide-awake and progressive, ensuring the largest possible value for the least possible expenditure.

\$50 Bicycles:

Regular EATONIA wheels, but not many of them. At the extremely low price of Fifty Dollars they can't possibly last long.

Earlier in the season we valued them at \$60. That was the best we could do then, \$50 is the best we can do now.

THE T. EATON CO. LIMITED,
190 YONGE ST. - TORONTO, ONT.

Going Away Soon?

When you go, be sure and call at BAIN'S to get a good supply of cheap summer boots to read when it is too hot for anything else.

We keep in stock all the new novels and all the popular books of the day. Telephone 1650 or call at

BAIN'S, 53 KING-ST. E., TORONTO.

Ask for Dewar's Scotch whisky, as supplied to her Majesty, Queen Victoria.

ABANDON SLEEPING CAR REGULATION

Two commercial travelers who have just returned from a trip to the Pacific Coast called on The World yesterday to protest against the regulations of the sleeping car companies. Although there were not more than a dozen passengers in the car occupied by these gentlemen, the passengers were obliged, according to the rules of the company, to sleep in the lower berth, while, without any loss to the company, they might have had a whole section and enjoyed the increased comfort and health that such increased accommodation would afford. This, of course, is no new inconvenience that travelers have to put up with. It is one of the rules of the company and it is invariably enforced, that every upper berth shall be kept down, whether there are passengers to occupy it or not. Travelers can readily put up with a night's travel in these confined quarters, but when it comes to journeying across the American Continent the constraint that is occasioned by so small a sleeping compartment becomes irksome. The object of the companies have in view in enforcing this rule is, of course, to induce passengers to take a whole section. But we believe the number of people who are thus influenced to pay double rates is very limited. It probably does not amount to more than three or four per cent. on all sleeping car passengers. The amount of air at the disposal of a passenger in one of the ordinary sleeping berths is much less than it should be, and the discomfort properly looked after the interests of the people it would compel the companies to either give larger sleeping accommodation or to adopt an adequate system of ventilation. We do not believe the companies make anything by pursuing their present dog-in-the-manger policy. On the other hand, we know the public suffer a great inconvenience. If the whole section were given to a passenger when there were no applicants for the upper berth, more people would be induced to take sleeping car than now do. The State of Wisconsin for some years now has had a law compelling sleeping car companies to give each passenger a full section provided there are no passengers to demand the upper half. A similar law could be introduced in Canada without hurting the railway companies, while it would prove an incalculable boon to the traveling public.

REPORT OF THE BUREAU OF MINES

The annual report of the Director of the Mining Bureau, just issued, forms an interesting reading for all engaged in directly or indirectly in the mining industry. The information in the volume is up to date, and in this respect it compares favorably with the official volumes that are now issued by the various departments of the United States Government. These latter are models which our departments ought to copy. When the Postmaster-General of the United States, for instance, issues a report, it contains the very latest information in his possession, even up to within a day or two of its publication. Mr. Blaine's report is commendable in following the same practice. In his report, for instance, we have quite a large number of pages devoted to the new process of producing calcium carbide, from which acetylene is obtained. It was only last fall that this important discovery was made known to the world, and the report contains the various important papers that have been read, and experiments that have been made since the discovery. From the report we learn that one or more firms in Canada are now engaged in manufacturing the carbide, and that it is the intention of a company to utilize the power that is going to waste over the Niagara Falls for the same purpose. Niagara Falls is certainly the place where the industry could be carried on most economically. The limestone and carbon that are essential to the process are found in abundance in the neighborhood of the falls. In fact, we have an inexhaustible supply of electric energy, which is the only additional factor that is required to reduce these materials to the carbide. The Director's reference to the development of Ontario's clay industry is worthy of attention. It is pointed out that a course of practical and scientific instruction in the art of clay-making and ceramics has been added to the educational work of the Ohio State University, and it is suggested that the same kind of instruction ought to be given in some of the scientific schools of Ontario. The manufacture of paving brick is destined to develop very largely, as well as other industries which have clay for their basis.

THE TUNNEL PROJECT

There are a dozen different projects which the city might properly undertake if we had the funds for carrying them out. Our debt, however, is so large and the interest charges so great that we cannot afford to depart from the course that we are now pursuing, of undertaking only those works that absolutely are necessary. It has been a wise policy on our part for a few years back to abstain from spending any money on the proposed trunk sewer, or on our park system and on other schemes whose object is beautification rather than utility. The temper of the people in regard to increasing our indebtedness was made apparent when the recent bylaws were submitted for the purchase of an electric light plant, and the installing of several mains connected with the water system. Of all the projects that are now before the people the one that probably most concerns our welfare is the proposed tunnel under the Bay. If our finances are limited we ought, in fact, we must, do without further extension of the park system. If we do not widen the subway or erect a bridge over the Don, it merely means a little more inconvenience for those who are accustomed to driving in

RAISING THE CIRCUS TENTS

THOUSANDS OF PEOPLE WELCOME THE BARNUM SHOW.

A World Reporter Describes the System of Getting Things in Position—864 Men Employed and 550 Horses—Ten Acres of Canvas Erected in a Surprisingly Short Time—Route of the Parade.

The greatest show on earth arrived in town yesterday morning, and the grounds in Bunting near King, were thronged all day. Owing to the Sabbath restrictions that exist in Toronto, only sufficient tents to shelter the stock and the employees were raised. Work was well under way before church time in the morning.

Arrival of the Show

The train bearing the big show arrived a little after 7 o'clock. There were very much larger crowds than on the previous day to see the parade. The animal wagons, tent wagons and the other wagons of the show were in place to place upon flat cars of unusual size. These cars carry from three to five of the wagons. There is a train running the length of the tracks, and on this the wagons are run. The openings between the wagons are such that the wagons can be wheeled in and out of the train without the entire length and unloaded. The wagons are loaded and unloaded by the drivers with their teams of splendid horses and hauled to the grounds.

550 Horses and 864 Men

There are 550 horses carried with this show. They are hauled from the cars without any confusion, and were seen a few moments later in harness, ready to start the heavy wagons from the lot. The army of men worked like beavers, but it was a noticeable fact that not one of them was a native of another. Each knew his work and attended strictly to it, so everything went in the smoothest manner.

A MARVEL OF STRENGTH

A Bicycle Will Carry Twenty Times Its Own Weight.

It seems absolutely impossible that a wheel thirty inches in diameter, with a wooden rim and wire spokes, should be able to carry twenty times its own weight. The State of Wisconsin for some years now has had a law compelling sleeping car companies to give each passenger a full section provided there are no passengers to demand the upper half. A similar law could be introduced in Canada without hurting the railway companies, while it would prove an incalculable boon to the traveling public.

PHOTOGRAPH DESCRIBED IN 1860

A few months ago while amusing myself with Cyrano de Bergerac's Histoire Comique des Etats et Empires de la Lune et du Soleil (Paris 1860), I was amazed to come across the following quoted below, which surely foreshadowed the photograph as closely as do Bacon's words the steamship and railway. The author, de Bergerac, is on a voyage to the moon. Left alone in a little while by his guide, the latter gives him, to help him while away the hour, some books to read. The books, however, are different from any seen on earth. They are, in fact, little boxes, which Cyrano thus describes:

"On opening one of these boxes I found I knew what kind of metal (apparatus) similar to our clockwork, composed of I know not how many little devices and imperceptible machinery. But the electric light, which is the most marvellous one, which has never leaves no characters; a book to understand which the eyes are useless—one needs only to use his ears. With the aid of a book he connects it by a sort of little nerve to his ears. Then he turns a handle to the chapter that he wishes to hear, and immediately the voice comes from the instrument as from the mouth of man, or from a musical instrument, all the words and sounds which serve the Grande Luminous machine."

"I will say further, that Cyrano anticipated many of the inventions and conceptions of modern aeroplanes. No wonder that he was considered by his contemporaries as 'somewhat off'."

Half a Million Damage by Hail

Fargo, N.D., July 28.—It is estimated that \$500,000 damage was done in North Dakota by a hailstorm Friday night. The crops are a total loss. Over 90,000 acres of wheat are destroyed. Most of the houses have been damaged and one man killed. The stricken district is four miles wide, and some districts over 200 miles long.

Use the safe, pleasant and effective worm killer, "Mother's Worms." Write for it; nothing equals it. Procure a bottle and take it home.

214 YONGE-STREET.

ALL MEN

Young, old or middle-aged, who find themselves nervous, weak and exhausted, who are broken down from excess of work, resulting in many of the following symptoms: Mental depression, premature old age, loss of vitality, loss of memory, bad dreams, dimness of sight, palpitation of the heart, nervousness, lack of energy, pain in the kidneys, headache, pimples on the face and body, itching or peeling of the skin, loss of appetite, loss of sleep, failure to be rested by sleep, weakness of the scalp and spine, weakness of the muscles, loss of voice, desire for solitude, irritability of temper, sunken eyes, surrounded with leader circles, oily looking skin, etc., are all symptoms of nervous debility that lead to insanity unless cured. The spring of vital force having lost its tension every function becomes in consequence. Those who through abuse of the system, or through excessive work, or through any other cause, find themselves in this condition, should at once send their address for book on diseases peculiar to man, sent free of charge, by mail, to J. FRASER BRYCE, 107 King-street West, Toronto, Ont., Canada.
