DR. MOFFATT'S TOOTH SYRINGE.

This Syringe is very carefully made, and will stand the test of wear; the only true test of any instrument. Its form is such that it may be held with perfect steadiness by two fingers passing

over the pojecting arms, the thumb pressing upon the bulb; in this way the point can be directed with perfect accuracy, without any of that uncertainty o aim so troublesome in other bulb syringes.

Being nickel-plated, it does not blacken from exposure to air, moisture, or contact with goods containing sulphur; it has two tubes, one straight and one curved, and the bulb is covered with silk netting. We do not hesitate to recommend this as the best Dental Syringe now made. Price, fitted in case, \$3.50.

CODMAN & SHURTLEFF'S BRACKET SPITTOON, No. 1.15

We here present a cut of a Spittoon of a te w design. It has a brass socket nd plate for atreliment to the vall by sc ews, a rass crane or support with a ring for holding the basin, which is of heavy span copper, trancal mside, and bowlshaped, to admit of easy clean ng. The spittoon funnel is of purple class. A tümbler bracket is conrected with the main bracket or crave by a socket at the point shown in the cut, and revolves independently. This bracket may be fixed in any convenient pésition by means of the thomb-serew at its base The whole swings in the lower chair socket and may be swung around so as to be

in a convenient position when the chair is upright and thrown back. When Anasthetics are used, the tumbler and funnel may be removed, leaving the spittoon as convenient as before, with no danger of breaking. We are confident that the convenience, durability and general appearance of this Spittoon will give it the preference over the common forms now PRICES. Price as per cut. \$10; the same with brackets Nickel Plated \$13; the in use. same with brackets and basin Nickel Plated, \$15. Illustrated priced c talegues on appli-
