

The Massachusetts General Hospital, in 1894, treated 4,605 patients with a mortality of 9.83 per cent, while the Massachusetts Homoeopathic Hospital, during the same year, treated 1,191 patients with a mortality of 4.19 per cent, or for the same number treated, they lost 234 to our 100.

Johns Hopkins Hospital (Baltimore) Allopathic, in 1894, treated 3,018 patients with a mortality of 6.52 per cent. At the Maryland Homoeopathic Hospital, there were treated 356 patients with a mortality of 3.37 per cent, or for the same number treated, they lost 193 to our 100.

In private practice Dr. Mills gives a collection of 8,000 cases of diphtheria in Chicago, (Dr. R. N. Tooker's figures) treated with antitoxin. Mortality, 22 percent. In same city 515 cases treated homoeopathically. Mortality, 7.3 per cent. Difference in favor of Homoeopathy over antitoxin, 14.7.

In an epidemic of typhoid fever at Stamford, Conn., in 1895, the mortality under old school treatment was 7.74 per cent., while under homoeopathic treatment it was 4.09 per cent.

At New Haven, Conn., from 1891-5, the mortality in scarlet fever, was 9.90 percent, under old school treatment and 4.30 under homoeopathic treatment.

In diphtheria the old school mortality was 35.45 per cent.; homoeopathic, 21.23 per cent.

In typhoid fever the old school mortality was 25.98; homoeopathic treatment, 20 per cent.

In measles the old school mortality was 17.83 per cent.; homoeopathic 1.88. A difference in this disease of 15.95 per cent, in favor of homoeopathy.

We have reported hospital records: Allopathic, 50,405 patients with a mortality of 10.32 per cent; Homoeopathic, 19,439 patients with a mortality of 6.97 per cent. In other words, for the same number of patients treated they lost 149 to our 100.

These figures show that with all its progress the "old," "scientific" or "allopathic" school, still lags woefully behind the homoeopathic in curing the ills of humanity.

Fish-bones can sometimes be expelled from the throat by giving from four to six ounces of milk, and forty minutes later an emetic of zinc sulphate. The vomit of coagulated milk carries the bone before it.

Purchasers should mention the Homoeopathic Record, to encourage our generous advertisers.

WOMAN'S AUXILIARY, MONTREAL HOMOEOPATHIC HOSPITAL.

Treasurer's Report, for June 1897.

R. Griffith; flowers, Y.W.C.T.U., Westmount; pans etc., Mrs. R. G. Reid; fresh eggs, Mrs. E. T. Woodley; cake, Boys' Anti-Tobacco Club, Westmount; chemises and nightdresses from Industrial Rooms, no name; collection of sundries, Madame Albert Hébert; flowers and cards, Westmount Band of Hope; flowers, Mrs. Leith, Outremont; oranges, Mrs. S. M. Baylis; strawberries, Mrs. W. E. Phillips; magazines, Mrs. Dinning, Lachine; Mrs. Gault; Mrs. Leitch; Mrs. R. G. Reid; Mrs. Sutherland Taylor; empty vials, Mrs. Sheffield, Miss Ames; Anon.; Mrs. R. G. Reid; Mrs. Ames; Mrs. J. K. Reid; Madame Albert Hébert; old linen, Miss M. Brush; Mrs. Ames; Madame Albert Hébert.

Special thanks are due to Mrs. Alexander Thomson, of Hamilton, Ont., for a Jubilee gift of a wrapper. Gifts from friends so remote, have a special significance and are highly prized.

Messrs. Charles Gurd & Co., have very kindly sent a generous donation of four dozen of ginger ale, and one dozen siphons of soda water. This is a particularly acceptable gift in times of high thermometer registerings.

HOSPITAL WANTS.

Palm-leaf fans. Old linen. Empty vials.
