

XXXVIII.

From A. E. KENNELLY, *Electrician, Edison's Laboratory, Orange, N. J.; Associate of the Institution of Electrical Engineers, New York.*

I have not the pleasure of being personally acquainted with Professor J. G. MacGregor, and know him only through having read many of his papers on physical Science, as also through the correspondence I have had with him on their subjects. I consider him to be pre-eminently gifted as a physicist, and especially as an experimental physicist. His papers are models of graphic precision and scientific accuracy, while his text book on "Kinematics and Dynamics," for an elementary treatise, is both masterly and comprehensive. There are, in my opinion, few men so well qualified by their scientific attainments as he, to fill with honor that post which it is his aim, and my sincere wish, he may obtain.

A. E. KENNELLY,

Electrician.

ORANGE, N. J.,
4th May, 1890.
