Club Arranges To Hold Garden Party in June, At Annual Meeting.

Mrs. J. Darling was elected the new president of the Boyle Memorial Methers' Club at the annual meeting held Tuesday evening in the school. This club has been in existence since 1915, and is very active in East London, especially in the carrying on of relief work in that district. The yearly report showed that a Christmas present of \$10 each to two needy families had been made, \$5 was donated to the Vic-torian Order of Nurses, \$10 to the Children's Shelter, and a great deal of sewing accomplished for the poor of the district. Twenty-one pairs of rompers were also made for the new Day Nursery. This club has also doubled its membership since last year. Mrs. A. E. Tutt of the Chesley Avenue Mothers' Club, was in the chair, and Mrs. Pellow, also of that club, gave some very fine readings. The club has arranged to hold a garden party in June.

Food that has begun to decay should at once be thrown out, for it will injure other food and cause a bad odor. The refrigerator should receive attention daily and a thorough cleaning weekly. Good ventilation is most important for good the vacuum cleaner. The stiff broom is just the thing to gather the trash on the porch or the papers left from cutting paper dolls in the nursery, but it raises too much dust for ordinary sweeping. I find a soft broom quite the thing to use in collecting the dirt and for brushing it into the dustpan, and the dustless mop is efficient in removstep in the sun, nor in the hot kitchen, but should be attended to at once. Wipe milk bottles, see that the tops are secure, then put at once into the refrigerator, or some cool place. Eggs should be wiped clean and put into a dry, cool place, free from strong odors, as the egg shells are porous and absorb odors readily. Butter bought in the dustless mop is efficient in floor, and the waxed mop on the waxed floor once or twice a week. I have used them more frequently, but I al-ways find that too much oil and wax are left and they cause the finish

When I had made the cleaning of the floors as simple as possible, I turned my attention to the woodwork, walls, windows, pictures, and bricabrac. My great discovery is that the use of a little water is more effective than a large quantity. In washing the woodwork, for example, I find the easiest and quickest way is to wring Parents Versus Children.

A young man who recently left his the degenerate who ventures to call home in the country to enter one of the great American universities writes, in part as follows:

"I am mineteen years old, and up to the standard of the particular type of contemptible in the particular type of contemptible in the standard of the particular type of contemptible in the particular interpretation that particular type of contemptible in the particular interpretation to trifite woodwork, for example, I find the woodwork in the particular is the woodwork, for example, I find the woodwork is the particular in woodwork, for example, I find the woodwork is the particular in the particular is the woodwork, for example, I find the woodwork is the particular in the particular is the par lessly used a circular motion a few times in rubbing, and I have always paid dear for my thoughtlessness, for the wood so treated has a smeared ap-pearance and must be washed and dried again.

I wash my wooden furniture, picture frames, and the papered walls in the same manner. And the secret of this same manner. And the secret of this efficient method is that little water is

Of course, great care must be taken not to add too much polish to the wood after it is washed. I have never succeeded in applying the furniture applying the furniture dust cloth and then rubolish to the dust cloth and then ing it on the furniture without deposition much. As a result fingerng too much. As a result finger-prints and a fog show and the dust colprints and a fog show and the dust collects easily, causing a black, gummy mass to form. When this gathers on my furniture, I remove it by wringing a cloth from hot water and rubbing it over the surface of the wood, drying with another cloth, and, of course, using the up-and-down movement in all operations.

using the up-and-down movement in all operations.

I have two dust-cloths which distribute the polish on furniture and woodwork in right amounts. Both are remnants of old black velveteen hats. I sprinkle about one tablespoonful of polish on each piece of velveteen and I sprinkle about one tablespoonful of polish on each piece of velveteen, and then roll the cloth into a tight roll, letting it stand at least over night befor using. This gives the polish time to penetrate throughout the cloth evenly, and it supplies just enough polish when used in dusting to keep the surface glossy and smooth. the surface glossy and smooth.

Window Washing.

Window Washing ceased to be a worry to me when I learned to use a small amount of water, about two parts of grain quinine capsule to break a cold. Is it safe to give quinine to a baby so young? (Mrs. L. M.)

ANSWER—It wouldn't be, if it were my baby. The effect of quinine in "breaking a cold" is open to so much doubt that it is inadvisable to give it to anyone for such purpose, in my opinion. At Jeast I should not take it myself. At least I should not take it myself. At least I should not take it myself if I had a respiratory infection which some grandmother called a "cold."

Just when Pete was wondering this a little boy came along.

"What a nice puppy," he said, and right there he picked Pete up in his arms. How very nice that was, thought Pete, and how easily he had found a home. But homes are not so quickly found he soon learned. The little boy had no intention of taking
