knowes vp this Bay

the said Mine, which

led vpon the Sea shoars on the South side. At the mouth of the said River, there is an Island lying a league into the See; from the said Island vnto the Ille Perre, is some sixtie or sev
enteen leagues. Still following the said coast, which trendeth toward the East, you meete with a Strait, which is two leagues broad, and fiftie and twenty leagues long. On the East side of the same, which is called the Ille of Saint Lawrence, where Cape Bretone is, is this place a Nation of Sauages, called the Savoies, doe winter.

Passeing the Strait of the Iles of Saint Lawrence, and tanging the South-west Coast, you come to Bay which ioynd hard vpon the Myne of Copper. Passeing farther there is a River, which reacheth therefore or fourscore or fowr score leagues into the Country, which reacheth vnto the Lake of Hove, whereby the said Shores of the South-west Coast make ware vpon them. It would exceede grete benefit, if there might be found a passeage on the Coast of Florida neare to the said great Lake, where the water is salt alswell for the Navigation of shipe, which should not be subject to so many perills as they are in Canada, as for the shorting of the way above three hundred leagues. And it is most certaine, that there are Rivers on the Coast of Florida, which are yet discouered, which pierce vp into the Countries, where the soile is exceeding good and sole, and very good Hauens. The Country and Coast of Florida may haue another temperature of the seale, and may bee more fertile in abundance of frutes and other things, than that which I haue seene: But it cannote haue more easie nor better syles, then those which we haue

The Sauages say, that in the foresaid great Bay of Hove there is a River, which runneth vp into the Country, at the head whereof there is a Lake, which may be one hundred leagues in compasse, wherein is little store of water, and the Summer it is dried up, whereas they find, about a foot or a foot and an halfe under the ground a kind of Metall like Silver, wchch I shewed them; and that in another place neare the said Lake there is a Mine of Copper. And this is that which I learned of the foresaid Sauages.

We departed from the Ille Perre the thirteenth day of the said moneth to returne to Tadouge. When we were within three leagues of Cap de Perre, or the Bisches Cape, we were accouerted with a storme which lasted two dayes, which forced vs to put roome with our creeks, and to aby for faire weather. The day following we departed, and were encouerted with another storme: Being loth to put roome, and thinke to gaine day, we tooke on the North through the night and reuerted day of May in a creeke which is very bad, besynd of shalnes, Rockes which he shalnes. This creeke is 11 yds. deppher then the said Ille Perre. The water is as chard never a Riller, which is called Sainte Marguerites Riller, whereof a full Starre is in three fachomes water, and a fachome and an halfe of a Starre whereof this Riller goeth shalnes up the Land. As farre as I could see within the Land on the East shalnes; there is a full of water which runneth downe the said Riller, and fiftie or fiftie fachomes downe, from whence cometh the greatest part of the water which descendeth downe. At the mouth thereof there is a bankes of Sand, wherupon as the tide is lowe halfe a fachome water. All the Coast to the East is running Sand; there is a pointe shalnes shalnes from the said Riller, which is in another halfe league from the old See, and toward the West there is a small islet: this isle is in fiftie degrees. All these Countries are exceeding bad, full of Rockes. The Land here is somwhat highe, but not so highe as that los the Sonckles. Some three leagues beyond vs passe neare to another Riller, which seemed to be very grewe, yet barred for the most part with Rockes: being so longe further therer is a Pointe which runneth a fachome and an halfe into the See, wherupon asone full a fachome and an halfe of water. Wher you are neare this Pointe, there arer about foure leagues off, where is water enough. All this Coast is low and flatte. There be boyldredes here as in euery where a Riller entred: many shipe may safe薄ke on the shalnes: this is a veray pointe, which runneth about a league into the Seale, and runneth alonge therer throughe some three hundred paces to enter into the Riller. This is the best paseage in all along the North shalnes y but it is very dangerous in going thicknesse cause of the flatnes of Sand, which lyeth for the most part all along the shore, all of two leagues into the shalnes: About five leagues from thence, there is a Bay where shalnes is 10 fath. deep, wchch may be 100 fath. or except on the East side, where is hauens aboue fowre or fowmey shalnes: wchch the shalnes which entred into the said Bay, Goue fowre leagues vny, where is a veray pointe, and another islet. And this pointe is low and flatte, wherid condereth a falt of water width is great. About leagues fowre or fowmey shalnes which stretch aboue before a leuge into the See, wherid there is a shalne, and from the one pointe to the other are three fachomes, but all are flatte, wherid little water. About two leagues off, there is a strand wherid there is good Hauens, and a small Riller, wherin are these flatnes, and where shipe may harbour themselves from the weather. Three leagues beyond this, is a fachome paseage which runneth out about a fachome and an halfe into a small illet. Going forward to Zeylandia, you mette with two little Islands, and others neare the shalnes: these fowre Islands are about halfe a leuge from Zeylandia, wherid the West Port, compassid with rockes, and dry at a low water, and you must passe about a fachome
