With

OSHAWA Galvanized STEEL SHINGLES

Put them on with no tools but a hammer and tinner's shears,—can't go wrong. They lock on all four sides, are self-draining and water-shedding on any roof with three or more inches pitch to the foot. Make buildings fire-proof, weatherproof and proof against lightning. Cost least in the long run. Made of 28-gauge toughened sheet steel—only one quality used and that the best—bent cold and double-galvanized. Last longer with no painting than any other metal shingles heavily-

Painted. Guaranteed in every way until 1932. Ought to last a century. Cheap as wood shingles in first cost: far cheaper in the long run. "Oshawa" Galvanized Steel Shingles cost only \$4.50 a square, 10 ft. x 10 ft. Tell us the area of any roof and hear our tempting offer for covering it with the cheapest roof you can really afford to buy. Let us send you FREE booklet about this roofing question—tells some things you may not know.

Oshawa Galvanized Steel Shingles are GUARANTEED in every way for Twenty-Five Years Ought to Last a Century

Why You Should Have A Cream Harvester

IF you are keeping three or more cows, it will pay you to own a Cream Harvester, because its use brings greater returns in the form of increased quantity and better quality of products, and because it removes much of the drudgery connected with dairy work.

It makes no difference whether you are making your cream into dairy products on your own farm or are shipping to a creamery. In either case the separator is equally important. It gives you more cream and leaves you the skimmed milk to be fed while yet warm to pigs or calves. If ground feed is added to this skimmed milk it becomes as valuable for feeding purposes as whole milk. This is one of the great advantages of a cream separator.

Then, the three big advantages of a separator are—more cream, less work and fresh skimmed milk for feeding, and these are sufficient to pay the cost of a separator in a short

time. But not all separators will do the same for you. Some make more work instead of less work, for they are so hard to operate and so hard to clean. Watch out for these things when you buy a separator.

It will pay you to call on the International local agent and examine **The Dairymaid and Bluebell Separators**. There you can see by actual test how they will skim down to the one thousandth part, whether the milk be warm, cold, rich, viscid or old. You can try for yourself, and see how easily they are operated. Notice in the illustration how the handle is at just the right height, and that the supply can is low while the milk and cream spouts are high.

You can see the excellent gearing, and how, though all the parts are covered to prevent dirt getting into the bearings, each is easily accessible; how strong and simple they are, and how this will give them great durability.

You can see how simple construction is the key note all through, and, what rigid care is exercised to make every part just right, and exactly so as to get best results with the least work and the least trouble.

The Bluebell is a gear drive machine, and the Dairymaid is a chain drive—you can take your choice. If it isn't convenient for you to call on the agent, write for catalogs. These tell in concise descriptions and in many excellent illustrations what you will wish to know.

Call on our Local Agent or write nearest branch house for catalogue.
