Wide Margin of Strength

IN purchasing a cream separator it is important to get one with a wide margin of strength. In that way you avoid possibilities of break-downs and secure a machine that will give long service. The 1915 Model

Standard

Cream Separator is now built with one frame and gearing for all capacities. This frame and gearing is strong and rugged enough to provide a wide margin of safety for the largest capacity. The main gear and intermediates have bearings 2½ inches long. The gearing would be sufficiently heavy to drive a bowl of even 2,000 pounds capacity. Think what a tremendous margin of strength this means in our 350- to 1,000-pound machines.

The bowls of the Standard (any size from 350 to 1,000 pounds) are also sufficiently over capacity to skim 20% faster than their rating and still do the work as well as other separator bowls.

To get a separator of super strength and over capacity is good business. You know that. But do you know all the other superior features of the Standard cream separator? Write for our latest separator catalogue and get full particulars.
