

# THREE CASES OF PUERPERAL SEPTICAEMIA, TREATED WITH ANTISTREPTOCOCCUS SERUM.

By K. C. McILWRAITH, M.B. TOR., F.O.S. ED.

Case 1.—Mrs. R., aged 38. Abortion about the fourth month. Admitted to Toronto General Hospital June 25th, 1901, under the care of Dr. Ross. Irregular fever, as shown by the

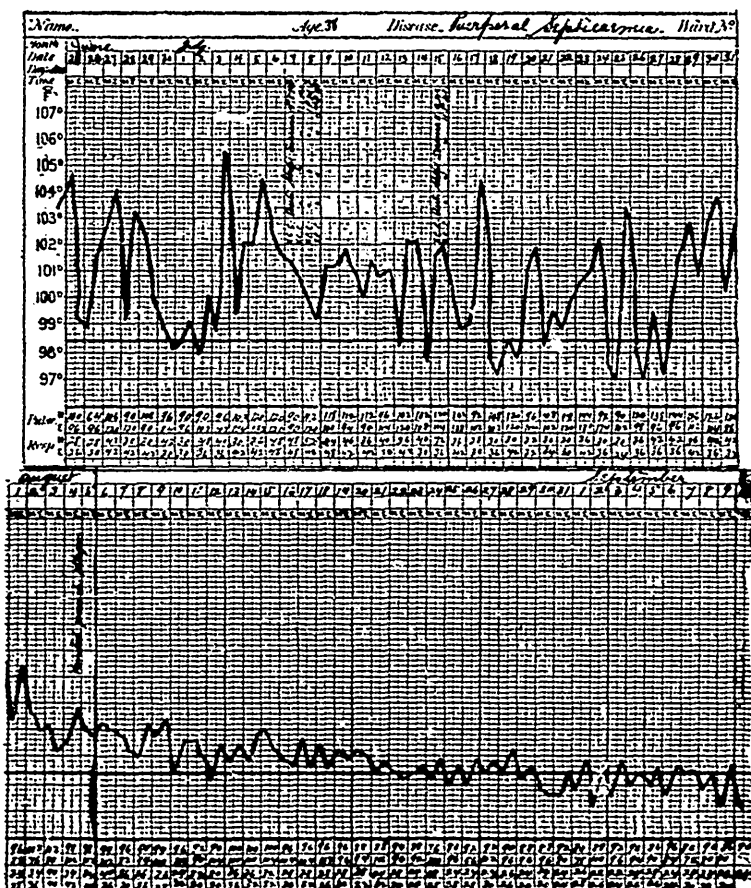

chart. I first saw the patient about the 5th of July. There was then some dulness and prolonged expiration at about the level of the third rib anteriorly in the left lung. Patient placed on strychnine hypodermically and whiskey and
