"The Ontario Agricultural College differed from most institutions of a similar nature in the United States, in its being strictly an Agricultural College. There was a great tendency to introduce into the scholastic course of such institutions, much that could be obtained in other colleges or universities. This course was for farmers and for them only, and it did not attempt to teach what was already well fanals.

But not only did it give him great pleasure to find that the work itself was successful, so far as the students and teachers of the College were concerned, but that it was likewise a success in the estimation of the Province at large, A great deal of that success arose from the fact that deepseated in the convictions of the people of the Province was the index that whilst agriculture was the most important industry of the Province, the people following that occupation were not gradually growing with its importance, taken as a whole. This failing had been growing unconsciously in the minds of the people, and it had found its expression through the public press and in the spoken words of public men. He would urge upon the young men to go into the business and make it as successful as their fathers did, and prove themselves the worthy sires. In order to obtain success we must not only have means in our hands, but we must likewise have men to use them; and in every business or profession an educated man, with all his faculties but we must likewise have men to use them; and in every business or profession an educated man, with all his faculties trained, possesses means for the performance of his duties, which are wanting to a man lacking this training. This applies with as much force to agriculture as to any other calling. It was well that the Legislature of the Province had determined that means should be placed within the reach of farmers to educate their sons for their business in such a way, that it would give them a wider range of thought, and give them a wider range of thought, and render them perfectly fit to occupy their proper position in the world and in society. It would be their duty to hew out for themselves, as their fathers had done, that success which makes the nation's success certain, by each one of them.

on the scope of a proposed enquiry to all matters of interest relating to agriculbe made by a Commission appointed by ture in Ontario or other countries. terests. The Globe, says :--
