

## WILSON'S CRAMP AND PAIN RELIEVER.

The Great Internal and External Vegetable Remedy for Cramps and Pains of all kinds,

is suited to cure a greater variety of diseases than any other medicine. It is at once *stimulating, penetrating and diffusive*. It cures pain, both by its revulsive action, and also by its direct action on the nerves. Inflammation is produced by a congestion of blood to any part, that is a stoppage of the blood, and this is caused by the irritation of a nerve. *What inflammation is to the blood vessels, pain is to a nerve*, a congestion of the visible nervous fluid in the courses of the nerve, a stoppage of its circulation.

WILSON'S CRAMP AND PAIN RELIEVER cures pain and inflammation by the same action. It is so penetrating that applied externally, when the trouble is not too deep-seated, it finds its way through the skin into the vessels and nerves, and there exerts its *stimulating action*, causing the overfilled vessels and nerves to contract and force on their extra contents, diffusing it through the system, thus restoring the balance of the circulation. Taken *internally*, an exactly similar effect follows,—inflammation and pain internally in no respect differ from the same things externally, and can be cured in the same way. This peculiarity in the action of WILSON'S CRAMP AND PAIN RELIEVER is what makes it so far superior to the preparations of Opium, Morphia, and Chloroform. They act by stupefying the brain, so that the pain is not felt, while the trouble is still going on: mere palliatives not cures, but WILSON'S CRAMP AND PAIN RELIEVER not only *relieves*, but *cures* the disease.

WILSON'S CRAMP AND PAIN RELIEVER cures *Chronic Coughs, Colds, Sore Throat and Diphtheria*, by using it externally upon the throat and chest, mixed with an equal quantity of sweet oil or goose oil, as a gargle, mixed in the proportion of a teaspoonful in half a cupful of milk and molasses, used frequently, and after each gargling swallowing from one to two teaspoonfuls of the mixture.

Indigestion, Cramps and Pains in the bowels, Diarrhoea, Cholera Morbus, Vomiting, Cankered Mouth and Stomach, are cured by rubbing the Reliever and Oil Mixture in externally over the seat of the pain, and taking it internally, mixed as before with milk and molasses, and using it at short intervals till relieved. If the disease is very severe, it may be used extensively in its pure state, following up the application with a cloth wrung out of hot water frequently changed.

In case of sea sickness, take from fifteen to twenty drops on sugar or with water,

and it will be found very efficient in relieving the terrible nausea.

WILSON'S CRAMP AND PAIN RELIEVER, applied externally either by rubbing it well in, or by simply saturating a piece of cotton with it, and applying it over the part, will be found an admirable remedy for Ague in the Face, Neuralgia, Rheumatism, Sciatica, Lumbago, Toothache, Bruises, Sprains and Strains, Felons, Frogs, Frostbites, Burns or Scalds, where the skin is not broken—Stings of Insects, and in fact for all the purposes of a Liniment, WILSON'S CRAMP AND PAIN RELIEVER cannot be surpassed. It combines in itself a *stimulant* which is powerful to prevent the effects of sudden colds—the fruitful mother of many severe diseases. An *anti-spasmodic* which relieves internal spasms and pains, and prevents the inflammation which is apt to follow them; and an *anti-septic* which destroys the causes of these diseases, by preventing putrefactive fermentation.

Cholera, Cholera Morbus, and Bloody Flux, in sudden and severe attacks take two or three teaspoonfuls of Wilson's Cramp and Pain Reliever, mixed as directed, *and drink it*, then bathe externally the stomach and bowels with the medicine, *undiluted*, also the limbs if they are cold. Repeat the dose *internally*, if necessary, and continue the bathing until relief is obtained. As Cholera and Cholera Morbus most generally commence with Diarrhoea, if you commence treatment for Diarrhoea in season, you will certainly avoid or prevent the secondary symptoms, Cholera. Should Cholera or Bowel Complaint prevail as an *epidemic*, take internally, once or twice a day, a teaspoonful in a little milk. It disinfects the malaria inhaled into the system, imparting warmth, vigor and health, and prevents the separation of the watery parts from other properties of the blood.

WILSON'S CRAMP AND PAIN RELIEVER is also an excellent remedy for Wind in the Stomach, and Flatulent Distensions, always troublesome, and frequently dangerous disorders. It is a safe and handy *domestic remedy, easy to use*, not liable to spoil by keeping, never dangerous in its effects, as too many pain relievers are, and should be kept in every house. For those who are working out of doors, in the hot season, as haymakers, and harvesters, a few teaspoonfuls of WILSON'S CRAMP AND PAIN RELIEVER, with a sufficient quantity of molasses, added to a pail of water, makes a safe and wholesome drink.
