

Which?

Crerar

The head of a great trading organization which unites its trading with its politics—a political theorist—has lost control of the political movement he started and is being driven into impossible positions by class rule extremists. He is under the domination of Wood, the political boss of Alberta. He would give effect to Free Trade, thus destroying Canada's industrial and economic structure.

A Vote for Crerar is a Vote for Chaos

King

So evasive that nobody knows where he actually stands on the great issues of the day. Fits his policy to suit his audiences. Talks Free Trade to the West and Protection to the East. Specializes in high-sounding phraseology. His party is pledged to a large measure of Free Trade, but fails to suggest new methods of obtaining necessary National Revenues.

A Vote for King is a Plunge in the Dark

Meighen

Easily the outstanding figure in Canadian public life to-day, and the only real Leader in sight. Able, forceful, courageous, and upright in character. A statesman of demonstrated ability with broad National and Imperial vision and an unassailable record. Stands firm for the maintenance of a reasonable Protective Tariff, and aims to provide the maximum amount of profitable labour for all.

A VOTE FOR MEIGHEN IS A VOTE FOR A SPEEDY RETURN TO MORE PROSPEROUS TIMES

BROCKVILLE

ONTARIO

"Cold in the Head"

is an acute attack of Nasal Catarrh. The subject to frequent "cold in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh. HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System, thus reducing the inflammation and restoring normal conditions. All druggists. Circulars free. F. J. Cheney & Co., Toledo, Ohio.

Womans Institute Items

The November meeting of the Women's Institute will be held Nov. 26. Our President, Mrs. D. L. Johnston, will give a report of the Ottawa Convention. Ladies, come and hear what women of other communities have accomplished.

Christmas suggestions will be in order. You are asked to bring for exhibit articles suitable for Christmas gifts. During the afternoon a short time will be given to the study of our Hand Book.

A good musical programme.

Every woman and girl welcome.

Many of the members of the Institute read the Canadian Home Journal. The subscription price is one dollar per year to Institute members. Through an error some ladies have received notice of an advance in the subscription rate.

Bring your dollar to the Institute meeting for November and see the Sec'y Treas. and secure your renewal at the Club rate. By so doing you will not miss any copies.

Notice to Creditors and Others

IN THE MATTER OF THE ESTATE of John Bourns, late of the township of Elizabethtown, in the County of Leeds, Farmer, deceased.

NOTICE is hereby given pursuant to "The revised Statutes of Ontario" 1914, Chapter 121, that all creditors and others having claims against the estate of the said John Bourns, who died on or about the eighth day of October, 1918, are required on or before the first day of December, 1921 to send by post prepaid or deliver to William Henry Bourns of the Village of Frankville, Physician, the administrator of the property of the said deceased, their Christian and surnames, addresses and descriptions, the full particulars of their claims, the statement of their accounts and the nature of the securities, if any, held by them.

AND FURTHER TAKE NOTICE that after such last mentioned date the said Administrator will proceed to distribute the assets of the deceased among the parties entitled thereto having regard only to the claims of which he shall then have notice, and that the said administrator will not be liable for the said assets or any part thereof to any person or persons of whose claim notice shall not have been received by him at the time of such distribution. Dated the 26th day of October 1921.

T. R. Beale,

Solicitor for Administrator.

BUILDING THE GRANARY

Strength and Convenience Should be Carefully Considered.

Reinforced Concrete is Preferable to Timber—It Makes the Granary Safer From Rodents—Roguing Potatoes.

(Contributed by Ontario Department of Agriculture, Toronto.)

No hard and fast rules can be laid down for the erection of a convenient and efficient granary. Each problem requires a knowledge of local conditions and requirements. Granaries, in the majority of cases, are built-in enclosures on the barn floor, and constructed with too little regard for strength, durability and convenience. These structures should be located immediately over the feed room, each bin having a chute with a controlling valve, or a canvas distributor to convey the grain to the hopper of the grinder; or, if the grain is intended for market, to a sack placed on the scales below the chute ready to receive it. To facilitate emptying the grain, the floor of the bins should be sloping.

Be Sure the Structure Has Sufficient Strength.

The important consideration in the construction of granaries and bins for loose grain is to be sure that the structure is designed with sufficient strength to prevent bulging of the sides and springing of the floor; for grain, owing to its enormous outward thrust, corresponding somewhat to that of water, has a tendency to burst the sides unless well braced or supported. Timber construction requires frequent repairs to prevent decay and general depreciation from use. It is always liable to climatic conditions. The boards will crack and shrink in the summer when the bins may be empty, and when the new grain is dumped into the bins an enormous quantity promptly disappears into the cracks and crevices and through mice holes, entailing considerable loss to the farmer, to the consumer and to the nation. Thousands of bushels of grain are, in this way, annually lost to the producers through sheer indifference to the condition of the granary. Yet this profitable waste may be easily remedied and made secure by lining the bins with sheet metal.

Good Concrete Improves With Age.

While there is an annual depreciation on a timber structure varying from four to eight per cent, concrete construction grows better as it grows old; hence concrete properly reinforced, is the ideal material for granaries, because it is both damp-proof and rat-proof, two very essential factors in the construction of granaries.

Concrete properly made to suit existing conditions, is absolutely impervious to moisture, and can be kept as dry as any structure of wood ever built. The experience of many farmers is that grain mature enough to be placed in storage will not spoil on contact with concrete, nor will corn mold, provided there is good ventilation and the roof is tight. To get rid of rats and mice destroy their nesting place and to this end concrete is pre-eminently the best material and is recommended for all farm structures.

Reinforced Concrete Pays.

Under average, present day, conditions a reinforced concrete granary presents an additional outlay of about 25 per cent over that required to construct of timber, but the high efficiency distinctive of concrete quickly offsets this increased initial cost. Concrete construction has many, in short, important advantages. The contents are safe from the depredations of rodents, is damp-proof, requires neither paint nor repairs, is fireproof, the grain is perfectly preserved under all conditions of climate and temperature, and the resulting structure is practically everlasting.—John Evans, O. A. College, Guelph.

Roguing Potatoes.

The average yield of potatoes per acre in the Province of Ontario for the past thirty-six years has been about one hundred and fifteen bushels. The yields vary greatly. In 1917 there were variations in Ontario from twenty-five or less up to seven hundred bushels per acre. People are realizing more and more that for high yields of potatoes conditions must be favorable. It is important to have good fertile soil well cultivated and to plant a liberal supply of seed of the best varieties at the proper time. Seed potatoes somewhat immature which have been produced in a cool climate, and which are comparatively free from disease, are apt to furnish seed of high quality. Even under these conditions it is well to carefully inspect the seed before planting and to thoroughly rogue the growing crop.

A potato field is rogued by removing the undesirable plants. A thorough roguing of the growing crop once or twice during the summer is one of the most effectual ways in raising the field of a number of the potato diseases. This operation would also insure the immediate removal of the weak and unthrifty plants which are sure to produce undesirable seed. Potato growers sometimes go through their fields and remove all plants which are not true to type. When roguing is done with a double object of eradicating diseases and of purifying the variety desired, advantages are sure to follow. Thorough roguing is one of the best methods of securing pure, healthy seed of high quality.—Dr. C. A. Zavitz, O. A. College, Guelph.

If troubled with mustard in grain crops, spray with a 20 per cent. solution of iron sulphate (two pounds of iron sulphate to each gallon of water.)
