"NONPAREIL"

Billiard Hall!

SHARKEY'S BUILDING.

OPP. OFFICERS' BARRACKS, QUEEN ST.

FREDERICTON, N. B.

T. E. FOSTER, Proprietor

THIS HALL has been newly fitted up and is now open for business. It is the most complete and comfortable Billiard Hall in the Dominion. The Billiard and Pool Tables are pronounced by players to be superior to any now in use in this Province. They are the BRILLIANT NOVELTY, size 41 x 9 feet.

The main object in the construction of the Billiard Novelty, and the one most noticeable, is that it embodies all the most important features that have rendered popular all the other styles of tables of the 41 x 9 ft. Standard & Burke Co.'s make. The Billiard Novelty has all the advantages and good points of the "Nonpareil" and "Exquisite" Novelties. "Ages" and "Amazons" Tables. The "Brilliant" is a happy combination of all these celebrated tables, and has rapidly taken the foremost place in the estimation of all players of Billiard and Pool Tables. The "Novelty" is finished and handomely inlaid in many different colors, made up from California Laurel, Barl Ash, French Walnut, Bird's Eye Maple, Mahogany, Rose Wood, Tulip Wood and Ebony. It is supplied with the finest Vermont Slate bed, Simons Cloth, and a first-class outfit of everything necessary for the game.

A call is respectfully solicited from lovers of the game.

Boys under sixteen not allowed in the hall.

Temperance drinks of all kinds, Cigars, etc.

T. E. FOSTER, Proprietor.

AN ALASKAN VOLCANO.

Report of an Exploration by Officers of

the Revenue Cutter Corwin.

WASHINGTON, D. C., July 20, 1884.—The

secretary of the treasury has received

from Capt. McKay of the United States

revenue cutter Corwin, under the date of

Aniakchak, May 28, two interesting reports

by officers of the Corwin, describing a

visit to the recently upheaved volcano

in Behring sea, at the northern end of

Bogosloff island, in lat. 53 deg. 55 m. 18

sec. N., long. 168 deg. 21 m. W. This

volcano, which is in a state of constant

and intense activity, was upheaved from

the sea in the summer of 1882, but was

not seen by any civilized eye until Sept.

27, 1882, when it was discovered by Capt.

Anderson of the schooner Matthew Turner.

A few days later, it was also seen by

Capt. Hogue of the steamer Dora, but on

landing upon it was made previous to

that by the officers of the Corwin last

spring. Dr. Yemans describes it as a

dull gray, irregularly cone-shaped hill,

about 100 feet in height, from the sides

and summit of which great volumes of

vapor were arising. At a height of about

two-thirds the distance from the base to

the apex of the cone, there issued a very

regular series of large steam jets, which

extended in a horizontal direction com-

pletely across the northwestern base of

the hill. Around those steam jets were

seen, upon nearer approach, deposits of

sulphur of various hues, which at a dis-

tance had looked like patches of vegeta-

tion. A landing was effected without

difficulty upon a narrow sand spit, con-

necting the new volcano with the old is-

land of Bogosloff, and Dr. Yemans and

Lieut. Cantwell undertook the ascent of

the smoking cone. It was covered by a

thin layer of ashes, formed into a crust by

the action of rain, which was not strong

enough to sustain a man's weight, and at

every step the climbers' feet crushed

thru it, and they sank knee deep into a

soft, almost impassable dust, which

arose in clouds and nearly suffocated

them. As the summit was neared, the

heat of the ashes became almost imbear-

able. A thermometer buried in them

halfway up the ascent marked 196 deg.,

and in a crevice of the ramparts of the

crater the mercury rapidly expanded and

filled the tube, when the boiler burst, and

shortly afterward the solder used in at-

taching the suspension ring to the in-

strument was fused. The temperature

was estimated at 500 deg. Far. On all

sides of the cone were perforations

through which the steam escaped, with

more or less energy, and in some cases

at regular intervals, like the exhaust of

a steam engine. The interior of the crater

could not be seen, on account of the

clouds of smoke and vapor which filled

it. "A curious fact to be noted," Lieut.

DECEIVED BY A MOCKING BIRD.

Street Car Horses Made to Think they

are Getting the Whistle to Go Ahead.

In the second window of a dwelling in

Fifth avenue, Brooklyn, around the cor-

ner from the Flatbush avenue depot of

the Long Island Railroad, and overlook-

ing the watering places for the horses on

ex-Daenon Richardson's Seventh and

Fifth avenue horse car lines, hangs a

talented mocking bird in a cage. It pipes

all day, and keeps it up until late at

night. Regular passengers on the horse

cars have learned to look for the bird's

notes. It whistles like a master for his

dog, chirps like a robin predicting rain,

clucks like a hen with her brood, and

squeals like a hurt chicken. Of late it

has learned to imitate the whistles which

conductors on the open horse cars use.

To the grief of the hostlers with the

water pails, the birds succeed to per-

fection in deceiving the horses. The water

supply is kept in three pails on a low

bench placed between the tracks. To

save time both of the horses are watered

simultaneously by two men who hold the

full pails of water to the horses' mouths.

When the horses' thirst is satisfied the

conductor sounds the whistle twice, and
