

whitish fuscous. Hind wings yellowish, sub-pellucid, with borders of yellowish (♀) or fuscous (♂); an extra median fuscous line and discal streak. Beneath as above, duller and more fuscous.

*Expanse* 25 mil. *Hab.* Texas, Belfrage, August and October, two specimens, No. 376. Resembles somewhat *Stenophyes serinalis*, but the color is different and the species is stouter.

*Botis fuscimaculalis*, n. s.

♂ ♀. Resembles *trimaculalis* so closely that it is difficult to distinguish it. The color is a duller yellow, the markings are all fainter, the veins are indicated by pale fuscous. The hind wings are whitish fuscous and the line is only fragmentary. Beneath the wings are more purely fuscous, without the yellowish stain. The three open spots on median space are present, but the reniform is upright, medially constricted and does not spread over the submedian nervules at base, consequently the exterior line does not come so near it inferiorly. Interior line more irregular, also the exterior line, but similarly shaped; the interior line is however deflected on the interspace between submedian vein and vein 1. But the species may be at once separated by the abdomen being whitish or fusco-whitish, not ochreous above as with *trimaculalis*.

*Expanse* 25 mil. *Hab.* Texas, Belfrage, No. 374; June and November; three specimens. Much narrower-winged and with more pointed apices than *Botis submedialis*.

*Botis flavicoloralis*, n. s.

Dull yellow, allied to the preceding species. Primaries concolorous, powdery, yellow, not shining; fringes whitish. Reniform open, very faintly outlined. No spot on submedian fold. Exterior line almost obliterate, very faint. Orbicular sub-obsolete, open. Hind wings whitish, with whitish fringes, stained with yellow exteriorly; extra mesial line narrow, lost inferiorly. Beneath hind wings whitish, with the mesial line fragmentary. Thorax above yellow; palpi brown at the sides, whitish beneath. Fore wings beneath pale, with the markings traced in pale fuscous.

*Expanse* 21 mil. Texas, Belfrage, Oct. 11, No. 374; one female.

Smaller than *fuscimaculalis*, with the lines obliterate and of a brighter yellow.
