

- that certain percentages of the initial aggregate amount of each group of chemical weapons be eliminated during each elimination period, and
- that methods for comparing stockpiles of different composition be elaborated.

This approach could be illustrated as follows:

Group of chemical weapons	Elimination period		
	I	II	III
	1-4 years after entry into force	4-7 years after entry into force	7-10 years after entry into force
Group A	40%	30%	30%
Group B	40%	30%	30%
Group C	100%	0%	0%
Group D	30%	40%	30%
Group E	30%	30%	40%

(It should be noted that the number and length of the elimination periods, the various percentages and the number of Groups are intended only as examples).

III. PRINCIPLES AND METHODS FOR THE VERIFICATION OF THE ELIMINATION OF CHEMICAL WEAPONS

The detailed arrangements for the actual verification of the elimination shall be worked out in collaboration between the State Party and the Consultative Committee (or its subsidiary organs, as appropriate) in accordance with the following principles:

A. Principles and methods for the verification of destruction of chemical weapons

The principles summarized in CD/CW/WP.108 are to be further elaborated.

They read:

- "- that the aim of the verification procedures should be
 - to confirm the identity and quantity of the materials to be destroyed, and
 - to confirm that the materials have actually and completely been destroyed,
- that a combination of human inspection and monitoring with instruments would be necessary for effective verification, but that the exact combination of instruments and inspectors would have to be tailored after the specific destruction processes to be monitored,
