Richard Pope, Sales Manager

Raypak Thermonics (Canada) Ltd. is a major Canadian producer of gas water heating equipment for swimming pools and spas.

Their new "Versa" series gas heater has improved flow design offering water flow through the heat exchanger at 115 gallons per minute. It will accept either 1½ inch (38 cm) or 2 inch (50 cm) connections to accommodate today's larger pumps. The Versa Unitherm Plus flow regulator system controls both water temperature and flow rate within the heat exchanger.

The patented Econotherm heat exchanger is made of unique, all

copper finned tubes while the header castings are made of porcelainized cast iron. Designed for right hand plumbing, it can easily be reversed for leftside installation.

The Versa combustion chamber is constructed of thick 1½ inch (38 cm) ceramic fibreboard panels for durability and lighter weight. A new top design for the stackless model shields the heater from wind and debris. A choice of millivolt-powered with standard pilot ignition or the electronic model with an energy saving intermittent ignition device (I.I.D.) is available.

R & D Pool Control Systems Ltd.

P.O. Box 8145
Dundas, Ontario

Telephone: (416) 627-3133
Main Export Contact:
J. Doug Paton, President

R & D Pool Control Systems Ltd. was incorporated federally by two faculty members of a community college in Ontario in 1973. This small, highly specialized firm designs water quality treatment and control systems for public and semi-public hydromassage and swimming pools.

The systems designed, sold, installed and monitored by the company, are on-line or side-stream sample electrodes sending signals to PC boards assembled in the U.S.A. to standards established by this firm. Motor contactors, flow switches, relays, valves, inserts and other remote readout meters are manufactured in Canada along with pipe and fittings (Sch. 80 PVC and CPVC). Each system is custom designed

and installed by this firm. Components, where applicable, are CSA, UL and Hydro approved of non-corroding FRP and stainless steel or plastic materials. Staff training and trouble shooting advisory services are also included. The systems meter and control acid-base levels in the sample stream as well as signal pumps, motors, relays to meter in disinfecting and oxidation chemicals and processes such as gas or liquid chlorine, bromine, iodine, complex of oxygen (ozone), or saline generated free available chlorine. The analog SPATROLLER is the only exclusive application system in North America for public whirlpools, spas, jetted tubs or hydromassage pools.

Rockcliffe Recreational Products Limited

**Div. of Scarborough Canvas
Fabricators Ltd.**

Main Export Contact:
Tim Golden, Director of Sales

Rockcliffe Recreational Products was developed to consolidate the vinyl liner and steel wall pool kit manufacturing capabilities of Scarborough Canvas Fabricators, its parent company.

Since the early 1960's, Scarborough Canvas Fabricators has grown to become one of the largest manufacturers of vinyl pool products in North America and has consistently led the industry in product innovation. It pioneered the development of continuous bead welding, full ¾ inch lap-welded seams and computer assisted design of vinyl liners.

Under the Rockcliffe name, the company, supplies over 60 designs of complete pool kits consisting of Z-700 galvanized steel wall panels, A-frames and deck supports. The liners are

varied in pattern and available in 20, 30 and 40 mil thicknesses. Each liner is made of 100 per cent virgin vinyl with super strong ¾ inch lap welds. They are fully sanitized, winterized, U.V. stabilized and top coated to protect the prints.
