The Moist Air System

is the most successful system of lumber drying when it is correctly applied. It dries stock in much less time than any other system, and is in itself an assurance of absolute safety from the dangers that infest all other processes.

There is no kiln on the market wherein the Moist Air System has been brought to such perfection and simplicity as in

THE STANDARD DRY KILN

Our Kiln is sold under a copper-fastened guarantee. But even if this were not the case, the hundreds of strong testimonials from prominent lumber manufacturers would convince you that you risk no loss in investing your money in THE STANDARD.

Write for our Catalogue "D" and read them.
