5 29	3 41					
6 19	3 41					

ore eyes, delayed meals, and work behind hand, all from wet  
ood, entirely prevented. Fences should be repaired as soon  
the weather will permit, rails laid up, loose boards nailed to  
osts, and gates well hung, in freely swinging, self-shutting and  
elf-latching order. Look after cows about to calve, give them  
warm place well littered, and keep calves separate from the  
ows, except for a short time while sucking; many a splendid  
ow has been dried up and spoiled by running with the calf.  
ive sheep good protection and plenty of food, but not too much.  
ick over decaying apples—procure fencing stuff—tread snow  
ound the fruit trees—thrash the grain early and cheat the rats.  
hen the sledding is good keep your teams going drawing  
ood, manure, and if practicable, peat or swamp muck to spread  
ver your barnyard to mix with manure.
