BRITISH COLUMBIA. GOOD NEWS FROM THE MINES.

Nothing can be more satisfactory than Nothing can be more satisfactory than the news which came from the Upper country last night by the *Henrietta*. More than twenty thousand dollars in dust was brought down by private hands. Not a complaint is heard now from any of the miners, and the utmost confidence prevails in the Criboo country the prospecting party mentioned in our correspondent's letter of last week that had gone down to Snow Shoe diggings had succeeded beyond their expectations; at country the prospecting party mentioned in our correspondent's letter of last week that had gone down to Snow Shoe diggings had succeeded beyond their expectations: at much as five dollars to the pan was in many places obtained. The country seems to present carry similar indications to the principal gold-fields in Australia, and mining operations are of a much more permanent character than in any other portion of British Columbia. Gold bearing quartz exists to an almost unlimited extent, and the Bald mountain at the head of the Snow Shoe diggings is thoroughly permeated with quartz veins; Large lumps of quartz and gold intermixed almost equally have been found in some of the claims. In fact the found in some of the claims. In fact the started, and Mr. Chandwick, Mr. Dobbin, mountains about here seem to be the foun-tain head of the gold in the upper country and we are in daily expectation of hearing of some "strike" being made that will re vive once more the exciting times of the early days of the gold mines in California and Australia. Numbers intend stopping during the winter season, but many wi winter about Cayoosh or other places farther down the Fraser. At all events there is, comparatively speaking, very few miners who have yet come down the river. Dr. Forbes, exploration along the Harrison Lilloet rout, has been one continued success. Almost every description of mineral has been Almost every description of mineral has been discoverd, and gold in paying quantities has been found in places never dreamed of by the miner. What will be most required in the spring of some attention paid to the trails about Quesnelle and Cariboo. At present a great price is charged on freight from Mud Lake or Alexander to the Cariboo, then from Cayoosh to Alexander. The road from Mud Lake to Beaver Lake—a distance of shout thirty miles—is a tolorable. distence of about thirty miles—is a tolearbly good rout, running as it does the greater distence of about thirty miles—is a tolearbly good rout, running as it does the greater portion over a comparatively speaking, level country; but the trail from Beaver Lake—crossing Quesnelle by ferry—to the Cariboo is extremely bad. The country over which the trail passes is both swampy and heavily timbered—even on the high grounds the road is very marshy. A large population nity be expected to visit the upper country the comming spring, when extraordinary yields may be reasonably anticipated—the principal part of the past season was occupied in prosecuting and getting ready for work—the ensuing season, however, will find at its commencement the miners already prepared to begin operations with vigour. There is everything, therefore, in favor of the miner after the expiration of winter. Cheaper fully forty per cent, than he had at the commencement of the present year, better prepared for the nature of the climate, and with an opertunity of getting to work and with an opertunity of

Strange to say, the fire can only be seen in the day time, the earth in the eavening bearing a close resemblance to phosphorus. The air smells as if pregnated with sulpher. The most remarkable feature in the case is the fact that woollen articles in the houses near by take fire, although there is nothing visible to ignite than Johnson.

A GOLD WATCH IN A BAG-BAG.

Fortunes do not always spring from great vestments or ten-thousand-dollar capitals investments or ten-thousand-dollar capitals. Small savings are oftentimes the germs of wealth—cent upon cent, half-dime upon half-dime, dollar upon dollar—these are the foundations that most frequently uphold golden structures.
