

Map showing the present distribution of San José Scale in Ontario. Areas darkened by close oblique lines are worst infested; those with lines farther apart are lightly affected, not every orchard being attacked. The small dark squares or rectangles indicate isolated infested localities in otherwise scale-free counties.

its being found elsewhere in the county it is probable that more careful search would reveal its presence to a slight extent in several other localities. In Wentworth all the section between the so-called "Mountain" and the lake is more or less infested, but we have no proof that it has yet spread beyond this district up into the higher land. In Halton there is a small area of about two miles square close to Burlington lightly infested. In Peel a few trees in one orchard at Dixie are somewhat badly attacked.

In the great fruit districts north of Lake Ontario and around Georgian Bay no trace of living scale could be found. It can easily be seen therefore that only a small portion of the Province is affected at present.
