Renovating Strawberry Beds

F. H. Hall, Geneva, N.Y. Usually it is better to set new strawberry beds each year than to continue the old ones. The advisabilcontinue the old ones. The advisability of removing more than one crop of fruit depends largely on the condition of the bed. If the strawberry plants are numerous, vigorous and healthy, and the ground not too weedy, they may be left for a second crop. Two and even three profiterors. crop. Two and even three profit-able crops may sometimes be harvest-ed before making a change. The berries ripen slightly earlier but average somewhat smaller on the older beds, and the plants are more liable to trouble from insects and diseases. The cost of cleaning out and earling for an old bed is usually greater than for setting a new one Under some conditions a quick-grow-ing crop maturing before winter may be grown upon the same soil if the strawbery vines be plowed under as strawbery vines be plowed under as soon as the crop has been harvested, or it may be advantageous to sow the ground to a clover cover-crop to be plowed under the following spring.

If the bed be retained for a second fertilize and cultivate the rows Some grovers go over the bed with a mow-ing machine and as soon as the leaves are sufficiently dry burn over the en-

be carefully done or injury may re-cult to the crowns of the plants. Such treatment tends to lessen insect and fungus troubles.

The majority of growers who re-tain their beds narrow down the old rows with plow, disc-harrow or cultivator to a width of from six to 12 inches, depending on the stand of plants, and cultivate thoroughly to losen the ground which has become har I and compact from the tread of the pickers. The weeds and surplus plants should be cut out from the rows remaining and a heavy application of plant food, preferably in the

Improve Potatoes by Selection

The Cultivator at Work in a Renovated Strawberry Patch

The Cultivator at Work in a Renovated Strawberry Fatch
This illustration shows Mr. G. B. Pattison, in the Clarkson district, Out,
as he was photographed in August, 1916, cultivating an old strawberry patch after
it had been renovated. After the crop was harvested the rubbish was moved
raked and drawn off the patch. A plow was then used to run a furrow on each
side of the rows, which left the rows about eight inches wide. The scuffler was
then run through twice, after which the rubbish was shaken up and hauled of
after which the rows were weeded and cleaned. Later in the fall this patch
would be hoed again; the cultivator—would be used each well possible to the
old of the growing season.
